INTRODUCTION

Overview

In spring, 2018, the Indiana Prevention Resource Center (IPRC) conducted the 28th annual *Indiana Youth Survey* (formerly known as the Annual Survey of Alcohol, Tobacco, and Other Drug Use by Indiana Children and Adolescents). The IPRC has conducted the *Indiana Youth Survey*, and has managed and reported the resulting data, since 1991. This project is administered through a contract with the Indiana Division of Mental Health and Addiction (DMHA) of the Indiana Family and Social Services Administration (FSSA). The purpose of this project is to provide data for state and local planning with respect to the use of alcohol, tobacco, and other drugs (ATOD), gambling behaviors, and factors that research has shown to be associated with either increased or decreased likelihood of ATOD use (i.e., risk and protective factors).

In January through April, 2018, local school officials administered surveys to students in Grades 6 through 12 in 407 schools throughout Indiana. A total of 119,991 youth from both public and nonpublic schools completed either paper-and-pencil or online surveys that asked about their use of various drugs, their age of first use of various drugs, and risk and protective factors. This process resulted in 112,240 usable surveys, the primary source of the data reported here. The Methodology section describes this process in more detail. The instruments are located in the appendix.

This report summarizes the findings of the 2018 *Indiana Youth Survey*. In addition to data from Indiana, the report contains national prevalence estimates, reported by Monitoring the Future (MTF) (Miech, Johnston, O'Malley, Bachman, & Schulenberg, 2017) and the United States (US) Centers for Disease Control and Prevention's Youth Risk Behavior Survey (YRBS) (Kann et al., 2018), to facilitate comparison with the United States as a whole.

The *Indiana Youth Survey* uses convenience sampling to collect data, meaning that it is a state-based survey in which any school or school corporation can participate. As noted in prior years, there are substantial advantages to collecting data in this way (e.g., Oetting & Beauvais, 1990). For example, any school or school corporation that participates has the opportunity to receive local-level data that directly address deficits and strengths in that specific community. Such tailored findings are not available from the larger national surveys (e.g., MTF and YRBS). The *Indiana Youth Survey* reports facilitate local needs assessment, planning, and evaluation of drug abuse prevention activities. The IPRC provides a report of local results to each

participating school corporation free of charge.¹ In 2016, the *Indiana Youth Survey* also added a biennial random sampling component to be completed each even-numbered year (e.g., 2016, 2018). This year, as an even-numbered year, this report also includes the results of the random sampling process.

As described in 2016, the randomized survey did not replace the standard *Indiana Youth Survey* but rather was conducted simultaneously in order to strengthen the Indiana substance use prevention infrastructure. The advantage of collecting a random sample alongside the convenience sample is that it allows the state-level data to be interpreted with much greater confidence in all areas of the state, including those where participation rates were low. Schools were eligible to be randomly sampled if they were public or charter schools and had at least one grade level (6th, 8th, 10th, or 12th) with an enrollment of 15 or greater. In total, 1,096 schools were eligible to be sampled; of those, 255 randomly were invited to participate, and 106 did so. Details about the random sample are located in the appropriate section, titled Random Sample, which explains this methodology in more detail and highlights the findings from that component of the *Indiana Youth Survey*.

National Outcome Measures (NOMs)

The Government Performance and Results Act of 2010 requires government agencies to report the results of their activities. In response, the US Department of Health and Human Services' Substance Abuse and Mental Health Services Administration (SAMHSA) designated a set of measures, called the National Outcome Measures (NOMs), for substance abuse prevention (Substance Abuse and Mental Health Services Administration [SAMHSA], 2008). SAMHSA collects the NOMs through its National Survey on Drug Use and Health (NSDUH) for all states, and it reports these data for states and sub-state regions (SAMHSA, 2008). The *Indiana Youth Survey* collects data on the majority of the substance abuse prevention NOMs for youth, and the IPRC also reports those data for Indiana as a whole and for the sub-state regions.

Increasingly, federal and state agencies require the NOMs for needs assessments and evaluations of local prevention programs that they fund. To compete for grants and to measure outcomes without developing new surveillance capacity, communities will need to be able to capture, track, and analyze the NOMs at the local level.

A unique benefit of participating in the *Indiana Youth Survey* is that participants receive NOMs data on their own schools and communities. The *Indiana Youth Survey* collects NOMs data on alcohol, tobacco, marijuana and a variety of other illicit drugs for the following measures:

¹ Data from an individual school corporation are the property of that corporation. Local data may neither be released nor obtained without the written permission of the corporation where the survey was conducted.

- thirty day prevalence of use,
- perceived risk of harm,
- age of first use, and
- perception of peer disapproval.

Communities That Care (CTC)

Between 2005 and 2011, the state of Indiana received funding through the Strategic Prevention Framework State Incentive Grant (SPF-SIG) to expand its prevention infrastructure and decrease substance use and related consequences. A total of 20 communities within the state were sub-recipients of these funds. Prior to the end of the grant funding, the State adopted an evidence-based planning model, called Communities That Care (CTC), to facilitate further expansion of the Strategic Prevention Framework (SPF) across Indiana's fourteen Defined Service Areas (DSAs). Although we no longer report data separated by DSA, the items measuring risk and protective factors established as part of the CTC model contribute to data-driven decision making and program evaluation.

Changes to the Survey

No changes were made to the 6th grade survey form in 2018. However, several modifications were made to the 2018 *Indiana Youth Survey 7 - 12th grade survey form*.

Page 2

- In light of the current epidemic of opioid use in the U.S., the item on prescription drug use was split into three components. The revised questions provide information specific to misuse of prescription opioids and more closely align with the National Institute on Drug Abuse's categorization of prescription medicines likely to be abused (NIDA, n.d.).
 - o Old format
 - ~~Prescription drugs (like OxyContin, Xanax, Vicodin, Adderall, etc.) not prescribed to you~~
 - o New format
 - Prescription painkillers (OxyContin, Vicodin, Codeine, etc.) not prescribed to you
 - Prescription stimulants (Adderall, Ritalin, etc.) not prescribed to you
 - Prescription sedatives (Xanax, Valium, etc.) not prescribed to you

Page 4

- The CTC scale measuring attitudes favorable towards antisocial behavior in the peer-individual domain was deleted. Few communities utilize the scale for their prevention initiatives.

- How wrong do you think it is for **SOMEONE YOUR AGE** to...?
 - Take a handgun to school
 - Steal something worth more than \$5
 - Attack someone with the idea of seriously hurting them
 - Pick a fight with someone
 - Stay away from school all day when their parents think they are at school

Page 7

- A set of questions on social norms regarding peer use of drugs was added. Many communities have chosen to implement social norms campaigns, but do not have community-level data to support the selection or evaluation of the campaigns. Therefore, adding norms questions will allow for communities to make data-driven decisions and engage in evaluation of their social norms media campaigns.
- How many times in the last month (30 days) do you think **MOST STUDENTS IN YOUR SCHOOL** used?
 - Alcoholic (beer, wine, liquor, wine coolers)
 - Cigarettes
 - Marijuana (pot, hash, weed, kush, Mary Jane)
 - Prescription painkillers (OxyCotin, Vicodin, Codeine, etc.) not prescribed to them
 - Prescription stimulants (Adderall, Ritalin, etc.) not prescribed to them
 - Prescription sedatives (Xanax, Valium, etc.) not prescribed to them
 - Response options: Never, 1-5 times, 6-19 times, 20-39 times, 40 times or more
- The CTC scale measuring interaction with antisocial peers in the peer-individual domain was deleted. Few communities utilize the scale for their prevention initiatives.
- Think of your four best friends (the friends you feel closest to). In the past year (12-months), how many of your best friends have...?
 - Been suspended from school
 - Carried a handgun
 - Sold illegal drugs
 - Stolen or tried to steal a motor vehicle such as a car or motorcycle
 - Been arrested
 - Dropped out of school

Page 8

- An item on the ‘What’s Your Side Effect’ campaign was added. Social norms are an important component of the ‘What’s Your Side Effect’ campaign and communities do not have the community-level data to support the evaluation of that part of the campaign. Adding this question will allow communities to make data-driven decisions regarding the ‘What’s Your Side Effect’ campaign.
- During the past 12 months, have you seen any “What’s Your Side Effect” messages in your school and/or your community?
 - Response options: No, yes, not sure
- Source: The Montana Institute, LLC 2015. The Positive Community Norms Student Survey, February 2015.

Regional Reporting

This report presents prevalence data broken out at the level of FSSA’s sub-state planning regions. These eight regions are aggregates of the state’s 92 counties, as indicated in Table 1. Prevalence data for sub-state planning regions provide more targeted information than statewide data. Regional results are detailed in the Results section.

Table 1. *Indiana Family and Social Services Administration (FSSA) planning regions*

Sub-state Regions	Counties
Central	Boone, Hamilton, Hancock, Hendricks, Johnson, Marion, Morgan, Shelby
East	Blackford, Delaware, Fayette, Grant, Henry, Jay, Madison, Randolph, Rush, Union, Wayne
North Central	Cass, Elkhart, Fulton, Howard, Kosciusko, La Porte, Marshall, Miami, St. Joseph, Tipton, Wabash
Northeast	Adams, Allen, De Kalb, Huntington, LaGrange, Noble, Steuben, Wells, Whitley
Northwest	Jasper, Lake, Newton, Porter, Pulaski, Starke
West	Benton, Carroll, Clay, Clinton, Fountain, Monroe, Montgomery, Owen, Parke, Putnam, Sullivan, Tippecanoe, Vermillion, Vigo, Warren, White
Southeast	Brown, Bartholomew, Decatur, Franklin, Lawrence, Jackson, Jennings, Ripley, Dearborn, Orange, Washington, Scott, Jefferson, Ohio, Switzerland, Crawford, Clark, Harrison, Floyd
Southwest	Greene, Knox, Daviess, Martin, Gibson, Pike, Dubois, Posey, Vanderburgh, Warrick, Spencer, Perry

RESULTS

This section of the monograph summarizes

- statewide convenience sample prevalence rates for 2018,
- regional findings,
- important patterns relating risk and protective factors to substance use, and
- consequences of use.

Alcohol, Tobacco, and Other Drugs

Statewide Prevalence Rates

The Survey Enhancement Team implemented changes to the survey and cleaning methodology in 2015 to increase the strength of the data. These changes altered how some data were calculated and made it difficult to compare prevalence rates reported before 2015 to those reported from 2015 to 2018. Thus, calculation of trend data can appropriately be done for all years prior to 2015, and **separately** for 2015 through 2018, but **should not** be combined for all years. In addition, as always, this report contains non-statistical comparisons to national survey data.

Highlighted Findings

The *Indiana Youth Survey* has asked about use of electronic vapor products, such as e-cigarettes, each year since 2015. Initially, we highlighted an emerging, rapid increase in e-cigarette use among youth. In 2013, the Centers for Disease Control and Prevention (CDC) released a report based on the National Youth Tobacco Survey (NYTS) that found significant increases from 2011 to 2012 in e-cigarette use among both middle- and high-school students in the US (CDC, 2013). In that report, monthly rates among middle school students had increased from 0.6% to 1.1%, and monthly rates among high school students had increased from 1.2% to 2.2%. In 2014, the Monitoring the Future (MTF) survey, which the *Indiana Youth Survey* uses as a source of national ATOD data, reported monthly use rates of 8.7% (8th grade), 16.2% (10th grade), and 17.1% (12th grade). Then, in 2015, the *Indiana Youth Survey* reported rates for corresponding grades in Indiana that were higher than 2014 MTF rates.

However, by the 2017 *Indiana Youth Survey*, past-month prevalence rates of electronic vaping product use significantly had decreased since 2015 for Indiana students in all grades except 7th. It was unclear at the time whether this was the

beginning of a true downward trend in electronic vapor product use in Indiana or was simple variation in the prevalence of the behavior. Data from this year’s (2018) *Indiana Youth Survey* suggest the latter, as rates of electronic vapor product use increased significantly and meaningfully for grades 7 through 12 (see Figure 1). Nearly three times more youth in those grades reported monthly use of such products, in aggregate (16.9% of youth), than the next most-frequently-used nicotine delivery product (cigarettes; 5.7% of youth – see Figure 2). For additional clarity, a trend-line for 12th grade youth in Indiana and the U.S. from 2015 to 2018 is provided as well (Figure 3).

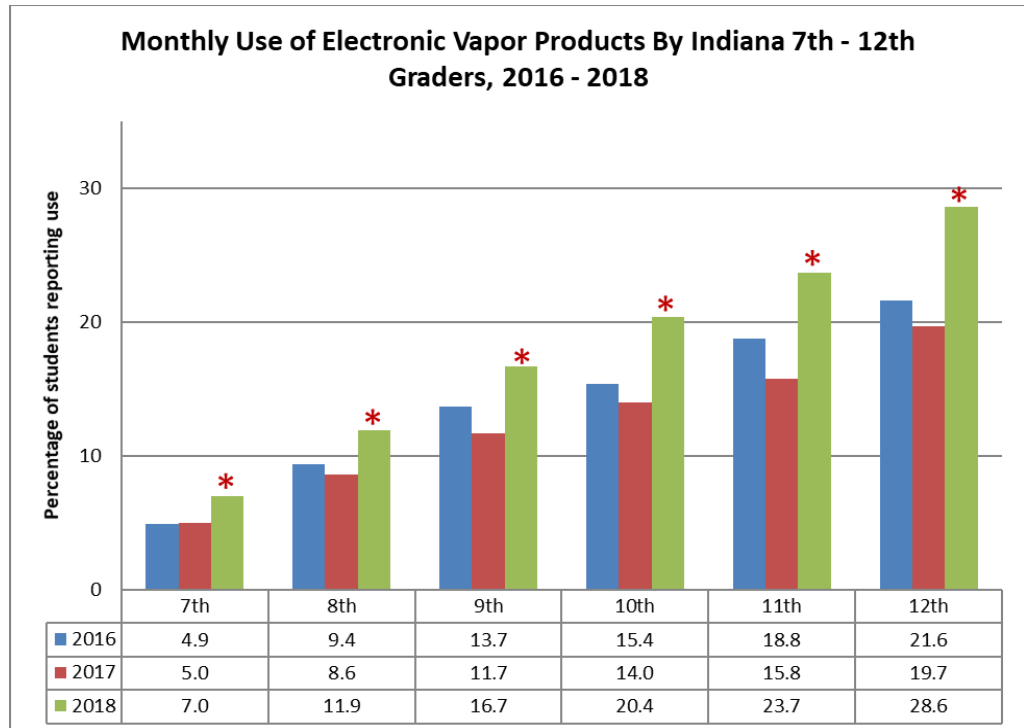

Figure 1. Comparison of monthly use of electronic vaping products by Indiana 7th - 12th grade students

Figure 2. Monthly use of nicotine products by a combined sample of all survey respondents

Figure 3. Monthly use of electronic vaping products by 12th-grade students, Indiana and US, 2015-2018

Gateway Drugs

Research has shown that the majority of individuals' illicit drug use occurs only after they use cigarettes, alcohol, or marijuana. These three substances are known as the “gateway drugs” (Donovan & Jessor, 1983; Fleming, Leventhal, Glynn, & Ershler, 1989; Bailey, 1992; Kandel & Yamaguchi, 1993; Golub & Johnson, 2001). There remains no scientific consensus as to the extent to which using gateway substances causally predisposes youth to using additional substances. An alternative to the gateway theory is that unmeasured common causes affect the trajectory of use for all substances (Degenhardt, Dierker, Chiu, Medina-Mora, Neumark, et al., 2010). Recent studies have implied a nuanced balance between the two; for example, a biological study indicated that nicotine may exert a priming effect on cocaine (Kandel & Kandel, 2014), while a longitudinal study emphasized that association with drug-using peers likely moderates substance use progression (Otten, Mun, & Dishion, 2017). In studying substance-dependent young adults, Palmer et al. (2012) proposed that “both common and substance-specific genetic and environmental factors” contribute to dependence on the three classes of gateway drugs.

Gateway Drug Use in Grades 6 to 8

Tobacco use in Grades 6 to 8

The survey for 6th-grade students asks about a single tobacco product: cigarettes. In 2018, 1.2% of 6th-grade students reported past-month use of cigarettes, which is not significantly different than the rate from 2017. Students in 7th and 8th grades also were asked about smokeless tobacco, cigars, pipes, and electronic vapor products. For both grades, the past-month prevalence rate for electronic vapor products was significantly higher this year than in 2017 (7th – 7.0%, 8th – 11.9%). However, students in 8th grade reported lower past-month prevalence rates for cigarettes (4.0%), smokeless tobacco (1.8%), and pipe smoking (1.4%). No other prevalence rates in this section changed significantly in 2018.

Alcohol use in Grades 6 to 8

Past-month alcohol use rates did not significantly change in 2018. Similarly, no significant changes were observed in binge drinking rates (7th and 8th grades only; 6th grade students were not asked that question).

Marijuana use in Grades 6 to 8

Past-month use of marijuana decreased significantly for students in 6th and 8th grades, but remained steady for students in 7th grade.

Gateway Drug Use in Grades 9 to 12

Tobacco use in Grades 9 to 12

Monthly prevalence rates declined for most substances in 2018, including cigarettes (all grades), smokeless tobacco (9th grade), cigars (9th and 12th grades only), and pipe (9th, 10th, and 12th grades only). However, prevalence rates for monthly electronic vapor products significantly increased for all grades.

Alcohol use in Grades 9 to 12

Past-month use of alcohol significantly decreased for students in all grades, and rates for binge drinking significantly decreased for students in 9th, 10th, and 12th grades.

Marijuana use in Grades 9 to 12

Past-month use of marijuana significantly decreased for students in all grades for 2018.

Other Drugs

Synthetic Marijuana Use in Grades 7 to 12

These substances have misleadingly been categorized as marijuana alternatives, but are actually “chemical grade synthetic cannabinoids” that may be sprayed onto plant matter and smoked or vaporized as a liquid (Rosenbaum, Carreiro, & Babu, 2012; NIDA, 2015b). The likelihood of adverse effects from synthetic marijuana use is greater than from marijuana use, and some ‘outbreaks’ of such effects have been identified in the U.S. (White, 2017).

Comparisons of marijuana use and synthetic marijuana use indicate that monthly use of marijuana is more prevalent than use of synthetic marijuana at every grade level for which it was measured (Figure 4). These results are consistent with those from a global survey of synthetic marijuana users with a median age of 23, which found that the vast majority of users prefer natural marijuana to synthetic cannabinoids (Winstock & Barratt, 2013). Recent research suggests that synthetic cannabinoids likely will continue to be less popular than marijuana (Lauritsen & Rosenberg, 2016).

Data on synthetic marijuana use are not available for 6th grade students after 2014, as those students began completing a separate instrument in 2015.

Figure 4. Monthly synthetic marijuana and marijuana use by Indiana 6th-12th grade students

Methamphetamine

Students in 8th grade reported a past-month prevalence rate for methamphetamine that was lower than the 2017 rate, but rates for other grades were similar to last year’s rates. The 6th-grade survey no longer asks specifically about methamphetamine (students instead respond to a prompt for ‘other illegal drugs’).

Table 2. Monthly use of methamphetamine by youth in Grades 7 to 12 (percentages), 2015-2018

Grade	2015	2016	2017	2018	Nation 2017
7	0.2	0.1	0.1	0.1	
8	0.3	0.1	0.2	0.1*	0.2
9	0.4	0.2	0.2	0.2	
10	0.5	0.3	0.3	0.3	0.1
11	0.5	0.5	0.3	0.3	
12	0.5	0.7	0.3	0.3	0.3

Note. National data from the Monitoring the Future Survey, 2017.

* p < .05

Prescription Drugs

Prescription drug abuse continues to be a serious health problem in the United States (Kirschner, Ginsburg, & Sulmasy, 2014; NIDA, 2015a). Prescription opioids are currently of particular concern due to the significant rise in use and misuse of opioids in the U.S. (Skolnick, 2018). In testimony before the United States Senate, Dr. Nora Volkow described the interplay between prescription opioids and the current opioid epidemic, while also identifying the potential risks of stimulant and central nervous system depressant (‘sedative’) prescriptions (NIDA, 2014). At the same time, nationally, the 12-17 age group is equally or less likely than the 18-25 and 26+ age groups to misuse or abuse any class of prescription substance (SAMHSA, 2017). The 2018 *Indiana Youth Survey* asked about three classes of prescription drugs used without a personal prescription, including painkillers, stimulants, and sedatives, and included examples of different substances for each class.

This is the first year that the *Indiana Youth Survey* has included questions about different classes of prescription substances separately, so comparisons to prior years cannot be drawn. Further, 6th grade students were not asked about separate prescription drug classes. In general, rates of prescription opioid use without a prescription ranged from a low of 0.8% (7th grade) to a high of 2.3% (11th grade). Rates of prescription stimulant use without a prescription ranged from a low of 0.5% (7th grade) to a high of 2.1% (10th and 12th grades), and rates of prescription sedative use without a prescription ranged from a low of 0.6% (7th grade) to a high 2.3% (10th and 11th grades).

In addition, for 7th through 12th grades, it is still possible to calculate overall prescription drug use without a prescription in a way that can be compared to previous years. For 2018, overall rates of prescription drug use without a prescription decreased for grades 8 and 12, and remained statistically similar for grades 7, 9, 10, and 11. The 12th grade rate in Indiana (3.7%) was lower than the national 12th grade rate reported by Monitoring the Future (4.9%) (see Figure 5).

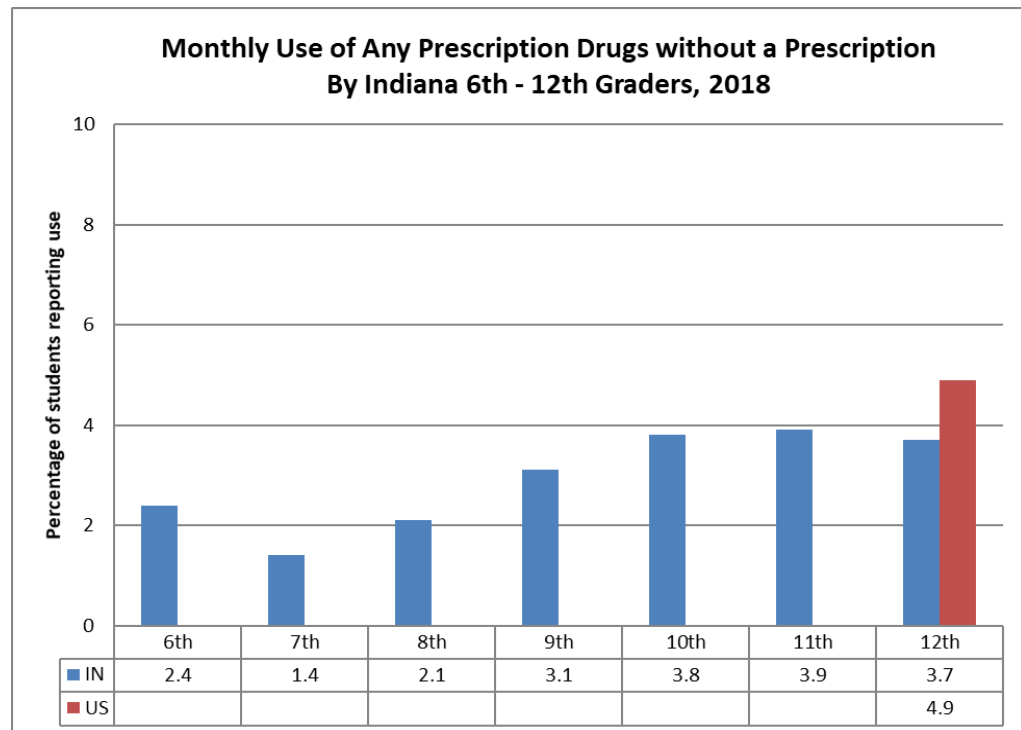

Figure 5. Monthly Use of Prescription Drugs without a Prescription by Indiana 6 - 12th Grade Students, 2018

Note. National data from the MTF are available for 12th graders only.

Heroin

Heroin has received increased public attention for its contribution to the opioid epidemic, especially in the past several years (Rudd, Seth, David, & Scholl, 2016). At the same time, rates of use among Indiana youth remained steady in 2018 for most grades and decreased for 9th grade. No grade reported a monthly prevalence rate for heroin greater than 0.2% in the 2018 *Indiana Youth Survey*. Note that 6th grade students did not complete this item.

Over-the-Counter (OTC) Drugs

Primarily referring to abuse of cough syrup (Vidourek, King, & Fehr, 2014), over-the-counter drug abuse (‘use to get high’) continues to be more prevalent than use of many illicit substances among Indiana youth. In 2018, prevalence rates of past month use of over-the-counter drugs to get high decreased for 7th, 8th, 11th, and 12th grade students, and remained similar for 9th and 10th grade students. Sixth-grade students were not asked to complete this question.

Hallucinogens/Ecstasy, Cocaine/Crack, and Inhalants

In 2015, hallucinogens and ecstasy were combined into a single item when assessing past month use of substances. This year, 9th and 12th grade students reported a past-

month prevalence rate for this group of substances that was lower than last year's rate, but prevalence rates did not change for other grades. Likewise, cocaine and crack were combined into a single item. In 2018, and prevalence rates of past month use decreased for 7th and 8th grade students and increased for 10th grade students. Students in 6th grade were not asked specifically about either pair of substances. Finally, all students (including 6th grade) were asked about past-month use of inhalants. The only significant change in 2018 for this class of substances was a decrease in past-month prevalence of use among 8th grade students.

Race and Ethnicity

This section reports monthly (past 30-day) prevalence rates for selected drugs for three race/ethnicity categories: Non-Hispanic White, Non-Hispanic Black or African-American, and Hispanic. We provide national data for comparison. Complete prevalence rates for each of these race/ethnicity categories by grade of respondent are reported in the Frequency Tables section of this monograph.

For this section of the report, we used the Youth Risk Behavior Survey (YRBS) for national comparison data. The national survey to which we usually compare prevalence measures, Monitoring the Future, was less appropriate for comparison since it provides only approximate weights for race/ethnicity subgroups, it reports data only for non-Hispanic Whites, non-Hispanic Blacks, and Hispanics, and it provides only two-year averages—rather than single-year estimates—for prevalence measures. The YRBS data are readily available, allowing for the calculation of the statistical significance of differences. The YRBS uses a race/ethnicity categorization similar to ours. Though YRBS questions are worded differently from ours, we chose to report in this section a concept (any use in the past 30 days) that is common to both instruments. Because the available YRBS data are from the 2017 survey, however, **substantial caution** should be used when interpreting statistically significant differences between our data and the national data as they measure different years.

Table 3 shows the average prevalence of monthly (past 30-day) use for respondents in Grades 9 to 12 by race/ethnicity category. YRBS national prevalence rates are provided for comparison. Statistically significant differences between Indiana prevalence rates and national prevalence rates ($p < .05$) are denoted with an asterisk (*). The substances shown were those common to both surveys for past 30-day use.

This year, statistically significant differences were observed between the *Indiana Youth Survey* data and the YRBS data for every available substance and most race/ethnicity substance pairings except cigarettes for Hispanic and Black students, smokeless tobacco for Black students, and binge drinking for Black students. Again, these results should be interpreted with great caution due to the time lapse between

the two periods of data collection. Additional care should be taken when assessing differences related to electronic vapor products, as there has been considerable yearly variance in rates of monthly use of this substance class.

Table 3. *Prevalence of past 30-day use of substances by race/ethnicity, students in Grades 9 to 12, 2018 Indiana Youth Survey and the 2017 Youth Risk Behavior Survey (percentages)*

Substance	IN	US	Substance	IN	US
Cigarettes*	7.3	7.8	Alcohol*	22.1	31.8
White*	7.8	9.9	White*	21.9	33.2
Black	3.4	2.8	Black*	19.1	24.3
Hispanic	7.0	6.6	Hispanic*	25.2	35.9
Smokeless tobacco*	4.0	1.9	Binge drinking**	9.4	14.1
White*	4.4	2.1	White*	9.3	15.9
Black	1.3	1.8	Black	6.8	6.8
Hispanic*	2.7	1.8	Hispanic*	11.9	16.0
Electronic vapor products*	21.7	10.5	Marijuana*	13.1	19.6
White*	22.4	11.8	White*	11.8	17.2
Black*	14.4	7.7	Black*	20.2	25.0
Hispanic*	21.7	10.5	Hispanic*	16.5	23.8

Notes.

IN = 2018 Indiana Youth Survey (Gassman et al., 2018).

US = 2017 Youth Risk Behavior Survey (YRBS) (Kann et al., 2018).

* $p < .05$

Binge drinking was measured during the past 2 weeks on the *Indiana Youth Survey*, while the YRBS measured it during the past 30 days

Gender

This section presents an analysis of differences in substance use prevalence between males and females. For this analysis, we calculated the difference between male and female past-month (30-day) prevalence rates for each drug (see Table 4). We analyzed differences that were statistically significant ($p < .05$). An additional table (see Table 5) provides further prevalence data for alcohol.

Six substances had higher prevalence rates of female users in some combination of grades 8 through 11, with the majority of instances observed for 9th grade students. These substances were: cigarettes, prescription drugs (any), electronic vapor products, marijuana, synthetic marijuana, and alcohol (including binge drinking). Beginning with 7th grade and extending through 12th grade, males consistently reported higher prevalence rates of cigar smoking and smokeless tobacco use than females. Higher rates of male drug use were observed intermittently, with the majority observed for 11th and 12th grades, where males reported higher prevalence

rates for 6 substances (11th grade) and 10 substances (12th grade; alcohol was included due to the binge drinking rate only), respectively.

Table 4. *Significant differences ($p < .05$) between male and female prevalence rates for substance use in the past month*

Where females' prevalence is higher, the cell is black with white text; where males' prevalence is higher, the cell is white with black text. Differences of zero and non-significant differences between genders are indicated by a dash (-). Sixth grade students were not asked about all substances (indicated by an empty gray box).

	Grade						
	6	7	8	9	10	11	12

Table 5. *Significant differences ($p < .05$) between male and female prevalence rates for alcohol use*

Where females' prevalence is higher, the cell is black with white text; where males' prevalence is higher, the cell is white with black text. For each drug and each gender, the largest difference across grades is underlined. Differences of zero and non-significant differences between genders are indicated by a dash (-). Sixth grade students were not asked about binge drinking (indicated by an empty gray box).

	Grade						
	6	7	8	9	10	11	12
Past month alcohol use	-1.2	--	2.6	4.4	2.2	3.0	--
Past 2-week binge drinking		--	1.6	1.8	--	--	-2.5

Regional Prevalence Rates

This section presents the *Indiana Youth Survey* results for Indiana's Family and Social Service Administration's sub-state planning regions (see Figure 6). Regional data provide more targeted information for local analyses. For the drugs studied, prevalence rates varied considerably among regions and between any given region and the state. This summary does not attempt to capture the extent of this variation;

however, a few examples are provided.

Compared to all respondents, statewide, in the...

- Southeast Region, youth were more likely to report past-month use of cigarettes (7th, 8th, 9th, 11th, and 12th grades), smokeless tobacco (all grades except 6th), electronic vapor products (7th and 12th grades), and alcohol (7th and 12th grades), along with other intermittent differences, both higher and lower than the state rates.
- West Region, youth in 12th grade were more likely to report past-month use of prescription drugs (overall and each class independently) and over-the-counter drugs than 12th grade youth in the state as a whole.
- Northwest Region, prevalence rates for past-month use of marijuana were higher than the state rates (8th through 12th grades), and both higher and lower rates – relative to the state rates – were observed for a variety of other substances.

The reasons for the regional variation are not addressed in this report. Communities may gain a better understanding of their own youth drug use by comparing their prevalence rates (in their local report) to the regional rates presented in this report.

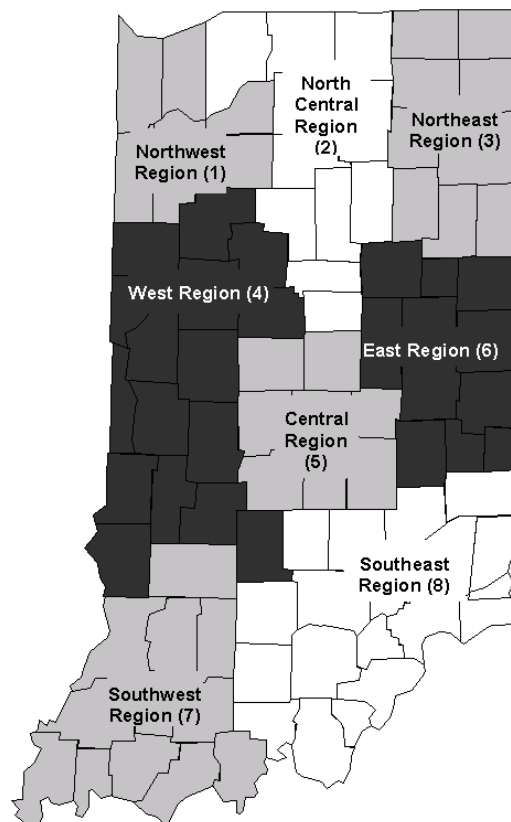

Figure 6. Indiana's Family and Social Service Administration's sub-state planning regions

Risk and Protective Factors

Age of First Use

Research has shown that the younger a person is when she or he begins using alcohol, the more likely the person is to experience alcohol dependence and abuse (Grant, Stinson, & Harford, 2001; Warner & White, 2003). Compared to persons who began drinking at age 21 or older, those who began drinking before age 14 were more likely to experience alcohol dependence later in life (Hingson, Heeren, & Winter, 2006).

Reported initiation of gateway drugs for 7th through 12th grade students exhibited a consistent pattern across all grade levels: cigarettes first, then alcohol, followed by marijuana, though this pattern did not hold for 6th grade, in which cigarettes and alcohol were initiated at the same mean age (see Table 6). In this section, data appear to indicate that the mean age of initiation increases with grade. However, this should be interpreted carefully. There are multiple factors that may cause the mean age of initiation to vary across grade levels, including historical events, memory errors for older individuals, and changing definitions of what might constitute ‘first use’ for a given student (Miech, Johnston, O’Malley, Bachman, & Schulenberg, 2015). Further, because grade levels have generally fixed sets of attending ages, mean age of initiation naturally rises with grade level (e.g., a 12-year-old cannot report a mean age of initiation of 14, setting a ‘soft cap’ on the ages of first use reported in 6th grade). Thus, it is most instructive to examine Tables 6 and 7 vertically (meaning within a grade) rather than horizontally (between grades). Examining these data within grades suggests the progression of substance use initiation: substances with lower mean ages of first-time use are likely used by students prior to substances with higher mean ages of first-time use.

Table 6. *Mean age of first time use of gateway drugs*

	Grade						
	6	7	8	9	10	11	12
Cigarettes	10.7	11.2	11.8	12.4	13.1	13.7	14.6
Alcohol	10.7	11.3	12.0	12.9	13.7	14.3	15.0
Marijuana	11.2	11.8	12.5	13.3	14.0	14.6	15.2

Table 7. Mean age of first time use of various substances

	Grade						
	6	7	8	9	10	11	12
Smokeless tobacco	--	11.5	12.2	12.9	13.5	14.2	14.8
Cigars	--	11.6	12.3	13.1	13.9	14.6	15.5
Pipe	--	11.5	12.3	13.0	13.7	14.3	15.3
Electronic vapor products	--	12.0	12.8	13.7	14.4	15.2	15.8
Synthetic marijuana	--	11.7	12.1	12.9	13.6	14.1	14.8
Cocaine/Crack	--	11.2	12.0	13.2	14.1	15.1	15.7
Inhalants	10.6	11.0	11.6	12.5	13.5	14.4	14.5
Methamphetamines	--	11.1	12.0	13.1	14.1	14.4	14.8
Heroin	--	10.8	12.0	12.6	13.4	14.1	13.6
Hallucinogens/Ecstasy	--	11.5	12.7	13.7	14.7	15.4	16.0
Prescription drugs	10.4	11.0	11.9	13.0	14.1	14.9	15.4
Over the counter drugs	11.0	10.6	11.2	11.9	12.8	13.6	13.9

Figure 7 displays trends in reported age of first use for gateway substances in Indiana. Data shared in this figure are combined for all students who completed the survey (the ‘mean age of initiation’ for a substance). However, for reasons described previously, **data from 2015 onward should not be compared to data collected prior to 2015.**

Figure 7. Trends in average reported age of first use of cigarettes, alcohol, and marijuana

Finally, this year, there was a significant increase in the reported age of initiation for marijuana (from 13.85 to 13.96, $t = 5.281$, $p < 0.001$).

Perception of Peer Use

This is the first year that the *Indiana Youth Survey* has included questions about normative beliefs. The specific norms measured by the questions are ‘descriptive norms,’ which refer to students’ perception of how other students are behaving (Cialdini, Kallgren, & Reno, 1991). A large body of research has examined descriptive norms for a variety of psychoactive substances, generally finding that a heightened perception of peer substance use is associated with higher levels of actual use (e.g., Padon, Rimal, Jernigan, Siegel, & Dejong, 2016; Ellickson, Bird, Orlando, Klein, & McCaffrey, 2003). At the same time, the relationship between descriptive norms and actual substance use is likely complex and multifaceted (Deutsch, Chernyavskiy, Steinley, & Slutske, 2015). In the 2018 *Indiana Youth Survey*, for all measured substances, the percentages of youth who perceived that the majority of their peers used that substance were substantially higher than the rates of actual use for those substances, which is consistent with the research (e.g., Neighbors, Dillard, Lewis, Bergstrom, & Neil, 2006).

Figure 8. Comparison of perceived and actual substance use rates, 2018

Perceived Risk of Harm

Prior research has demonstrated that perceived risk of harm of using drugs is negatively related to prevalence of use (Millstein & Halpern-Felsher, 2002; Wild, Hinson, Cunningham, & Bacchiochi, 2001). To examine this relationship in the

Indiana Youth Survey data, respondents' perceived harm of using gateway drugs was correlated with reported monthly use of gateway drugs (see Table 8 for definitions of monthly use of gateway drugs). The survey measured perceived risk of harm for the three gateway substances using this question: "How much do you think people risk harming themselves (physically or in other ways) if they... (a) smoke one or more packs of cigarettes per day, (b) smoke marijuana once or twice per week, (c) have five or more drinks of an alcoholic beverage (beer, wine, liquor) once or twice a week."

Table 8. Glossary of prevalence of monthly gateway drug use for all correlation analyses

Monthly Use	
Cigarettes	How many times in the last month (30 days) have you used cigarettes?
Alcohol	How many times in the last month (30 days) have you used alcohol (beer, wine, liquor, wine coolers)?
Marijuana	How many times in the last month (30 days) have you used marijuana (pot, hash, weed, kush, Mary Jane)?

The results show that higher perceived risk of harm was associated with lower monthly use of cigarettes, marijuana, and alcohol (see Figure 9).

Figure 9. Line of best fit for the correlation of perceived risk of harm and monthly prevalence of gateway drug use

Perceptions of Peer Approval

Research has demonstrated that when adolescents perceive that their peers do not approve of alcohol or substance use, it may exert an influence that lowers the

likelihood of use (Butters, 2004; Chassin, Presson, & Sherman, 1984). To examine this relationship in the *Indiana Youth Survey* data, respondents' perceptions of peer approval were correlated with reported use of gateway drugs (see Table 8 for a definition of monthly use of gateway drugs).

Perceived peer approval was measured for three gateway drugs with the survey items: "How wrong do your friends feel it would be for you to... (a) smoke tobacco; (b) smoke marijuana, (c) have one or two drinks of an alcoholic beverage (beer, wine, liquor) nearly every day."

The results illustrate that when reported perception of peer approval for a particular behavior is stronger, the reported level of the behavior is higher (see Figure 10).

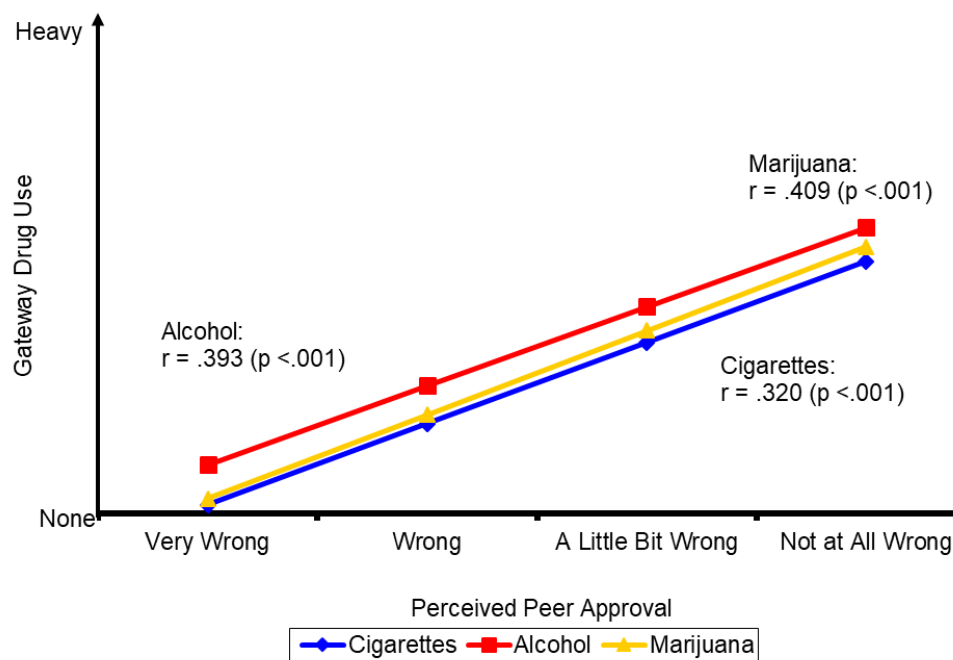

Figure 10. Line of best fit for the correlation of perceived peer approval and monthly prevalence of gateway drug use

Perceptions of Parents' Approval

The *Indiana Youth Survey* data measured perceived parental approval for the use of three gateway drugs with the following items: "How wrong do your parents feel it would be for you to... (a) smoke cigarettes?; (b) smoke marijuana?; (c) drink beer, wine, or hard liquor (vodka, whiskey, or gin) regularly (at least once or twice a month)?" The results appear in the prevalence tables.

Adolescents' perceptions of parental approval of substance use are positively related to the frequency of adolescents' use of alcohol, tobacco and marijuana (Briney, Brown, Hawkins, & Arthur, 2012; McMaster & Wintre, 1996; Lee et al., 2000;

Jessor & Donovan, 1978; Barnes & Welte, 1986). To examine this relationship in the *Indiana Youth Survey* data, respondents' perceptions of parents' approval were correlated with reported use of gateway drugs in the previous month. Respondents tended to report engaging in these behaviors more often when they also reported stronger perceived parental approval for the behavior (see Figure 11). These findings are consistent with the research cited.

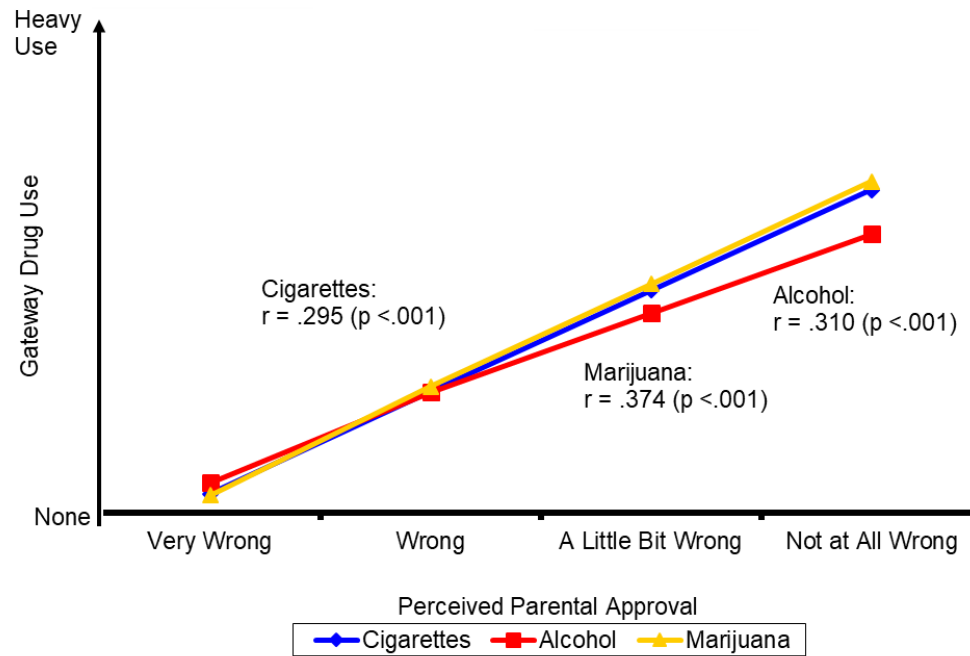

Figure 11. Line of best fit for the correlation of perceived parental approval and monthly prevalence of gateway drug use

Perceived Availability of Drugs

Studies have shown that youth perceptions of available access to alcohol and other drugs put them at risk for use of tobacco, alcohol, and marijuana (Kuntsche & Gmel, 2008; Gillespie, Neale, & Kendler, 2008; Lipperman-Kreda & Grube, 2009).

Perceived availability of drugs was measured by the following items: “How easy would it be for you to get... (a) Cigarettes, (b) Beer, wine or liquor (for example, vodka, whiskey or gin), (c) Marijuana, (d) A drug like cocaine, LSD or amphetamines.”

The results indicate that perceptions of ease of access were associated with higher monthly use of tobacco products, alcohol, and marijuana (see Figure 12). These findings support the value of prevention actions that take into account the social acceptance of drinking and drug use and the physical availability of these substances in the community.

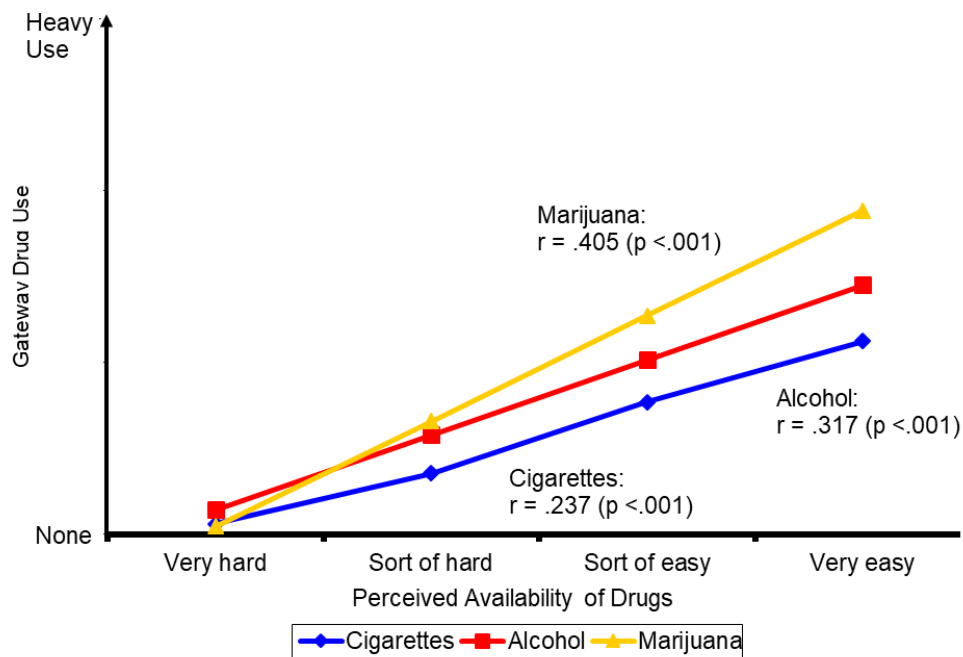

Figure 12. Line of best fit for the correlation of perceived availability of gateway drugs and monthly prevalence of gateway drug use

Access to Alcohol

A public health strategy to reduce alcohol abuse by youth is to identify the primary sources of alcohol access and to target interventions to mitigate access at those points (Dent et al., 2005). Adults over the age of 21 are common sources of alcohol access for youth (Wagenaar et al., 1996; Jones-Webb et al., 1997). However, the sources tend to vary by age. Younger adolescents tend to get alcohol from their homes and families, while older adolescents tend to get alcohol from friends and commercial sources (Harrison et al., 2000; Hearst et al., 2007).

The percentage of respondents who reported accessing alcohol from specific sources is shown for each grade in Table 9. This item was not included on the 6th-grade instrument. The results are consistent with the research cited in this section. This summary excludes the response ‘I got it some other way,’ which may include a wide variety of other methods.

Parents and guardians and a person 21 years or older were the primary sources of accessing alcohol for youth in 7th and 8th grades. In 9th grade through 12th grade, the most common sources of alcohol were a person 21 years or older and a party, with those sources falling within +/- 1.1 percentage points of each other and being more prevalent than other sources.

These results are consistent with research suggesting that youth drinking could be reduced if parents and family members better understood the risk of harm to youth that alcohol presents, as well as ways to prevent youth from accessing alcohol kept in the home (Small, Suzuki, & Maleku, 2014). Further, laws related to hosting of underage drinking parties and/or social host liability have been endorsed by some researchers as evidence-based prevention strategies (Harding et al., 2016). In addition, the results suggest that persons age 21 and older may need to be informed of the laws (e.g. hosting, legal age) and penalties that apply to purchasing and/or otherwise supplying alcohol to minors.

Table 9. Usual sources of alcoholic beverages in the past month (percentages)

	Grade						Total
	7	8	9	10	11	12	
I did not drink alcohol	89.7	82.4	77.2	69.9	65.1	58.9	75.3
I bought it at a restaurant, bar, or club	0.2	0.2	0.4	0.6	1.1	1.9	0.6
I bought it at a public event	0.3	0.3	0.5	0.8	1.3	2.1	0.8
I gave someone else money to buy it for me	0.9	2.2	4.8	8.4	13.0	18.2	6.9
I bought it at a store	0.2	0.2	0.5	0.7	1.3	2.1	0.7
A person 21 years old or older gave it to me	3.7	6.5	8.9	12.5	16.8	21.6	10.7
A person under 21 years old gave it to me	1.6	3.5	5.8	8.8	10.9	11.9	6.5
I took it from a store	0.2	0.4	0.7	1.1	1.3	1.1	0.7

I got it from a parent/guardian	4.4	6.1	6.7	8.0	8.4	10.1	7.1
I got it from some other family member	2.9	4.9	5.6	7.0	7.8	9.1	6.0
I got it some other way	3.8	6.9	7.6	8.5	8.2	8.6	7.2

Note: Multiple responses allowed; percentages do not add to 100%.

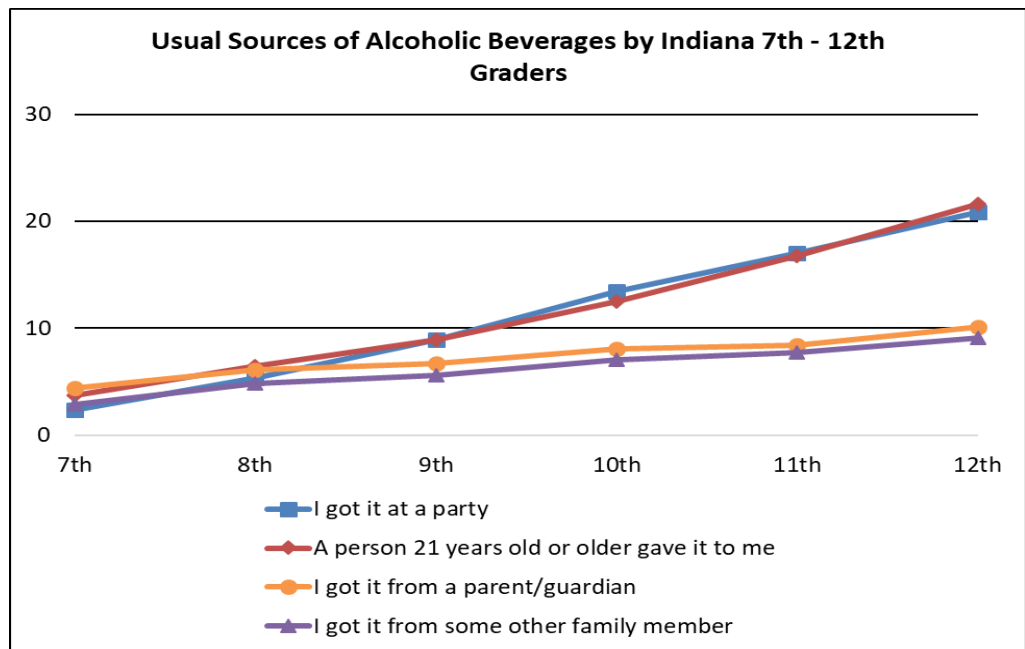

Figure 13. Usual Sources of Alcoholic Beverages, expressed as percentages

Access to Prescription Drugs

Table 10 shows the percentages of youth who report having obtained prescription drugs in specific ways during the past month. In total, 94.3% of respondents indicated that they did not use prescription drugs to get high during the past month. Among those who reported use of prescription drugs to get high the most frequently identified sources were “they were prescribed to me,” followed by “someone other than my parents gave them to me,” and “I bought them from someone.” These prevalence rates varied relatively little between grade levels. However, students in older grade levels reported higher frequencies for two sources of prescription drugs, “someone other than my parents gave them to me,” and “I bought them from someone,” than students in younger grade levels.

Table 10. *Usual sources of prescription drugs in the past month (percentages)*

	Grade						Total
	7	8	9	10	11	12	
I did not use prescription drugs to get high	96.2	95.3	94.4	93.1	93.1	93.0	94.3
They were prescribed to me	2.8	2.4	2.5	2.4	2.3	2.5	2.5
My parents gave them to me	0.6	0.7	0.7	0.7	0.6	0.6	0.7
Someone other than my parents gave them to me	0.9	1.5	2.1	2.7	2.7	2.8	2.0
I took them from home	0.5	1.0	1.1	1.4	1.2	1.1	1.0
I bought them from someone	0.6	1.2	1.9	2.7	2.9	2.6	1.9
I bought them on the internet	0.2	0.2	0.3	0.2	0.2	0.3	0.2

I got them some other way	0.8	1.2	1.5	1.4	1.5	1.4	1.3

Note: Multiple responses allowed; percentages do not add to 100%.

Communities That Care Risk and Protective Factors

Risk factors are conditions that increase the chances that children will become involved in problem behaviors in adolescence and young adulthood (Hawkins & Catalano, 2005). Measures included in the *Indiana Youth Survey* from the Communities That Care (CTC) System can predict alcohol and other drug use, as well as delinquency, dropping out of school, teen pregnancy and violence. Students with elevated risk factor scores have a higher likelihood of substance use and problem behaviors compared to those with low risk factor scores.

CTC is based on the Social Development Strategy that has as its principal focus the strengthening of protective factors. Protective factors are conditions that have a positive influence and “protect” or “buffer” against the negative influences associated with risk factors. The research-based Social Development Model has shown that positive social development in youth is promoted by the following basic factors: 1) opportunities for developmentally appropriate involvement; 2) skills; 3)

recognition for effort, improvement and achievement; 4) strong social bonds; and 5) clear consistent standards for behavior. Though closely related, protective factors are not the opposite of risk factors but rather reduce the effects of existing risk factors. Recent studies of the CTC model in the United States have found that it is a cost-beneficial prevention system, with a benefit-cost ratio of \$8.22 per dollar invested, owing in part to prevention of delinquency and alcohol and tobacco use initiation (Kuklinski, Fagan, Hawkins, Briney, & Catalano, 2015).

A national study determined optimal cut points used to define high and low risk and protective factor scores for students in Grades 6, 8, 10 and 12 (Arthur, Briney, Hawkins, Abbott, Brooke-Weiss, et al., 2007). In that study, a survey of risk and protective factors was sent to a large sample of students and the median score for each factor was identified; these scores were set as the cut points. Although not shown, those cut points were used in Table 11 and Table 12 to calculate the percentages of Indiana students with high and low risk and protective factor scores, respectively, by grade.

CTC categorizes risk and protective factors into four domains of socialization: Community, Family, School and Peer-Individual (see Table 11 and Table 12). Sixth grade students completing the shortened survey instrument were not asked to complete many of the CTC risk factor scales. In Table 11, those values are noted as being unavailable (--).

Twelve risk factors were assessed on the 7th- to 12th-grade instrument, and five risk factors were assessed on the 6th-grade instrument. For four of the risk factor scales, the percentages of youth considered to be at high risk increased with each successive grade (e.g., perceived availability of drugs, for which 18.7% [8th], 24.6% [10th], and 31.0% [12th] of youth were at high risk). These scales were: perceived availability of drugs, parental attitudes favorable toward drug use, low school commitment, and attitudes favorable to drug use. For two of the risk factor scales, the percentages of youth at high risk exceeded 50.0% for at least one grade: low school commitment (8th, 10th, and 12th) and perceived risk of drug use (6th, 8th, 10th, and 12th). These same areas of elevated risk have been present in prior years as well, and may provide indications as to needs that could be addressed in the state.

Table 11. *Percentage of students with CTC risk factor scores at/below (low risk) or above (high risk) the national standard[#]*

		Grade			
		6th	8th	10th	12th

Notes. # The national standards (cut-off points) are provided by the Social Development Research Group at the University of Washington.

† The scale is missing one item out of four items from the original CTC scale.

-- Data are not available.

Figure 14. CTC risk factors

Six CTC protective factor scales were included on both the 6th-grade and 7th- to 12th-grade *Indiana Youth Survey* instruments. Levels of low protection at or exceeding 50.0% for at least one grade were observed for community rewards for prosocial involvement (6th, 8th, 10th, and 12th) and school rewards for prosocial involvement (12th). For each of the scales, levels of protection were relatively similar across grade levels, with some uneven variation, such as 6th grade students reporting a higher percentage of students at low protection for family rewards for prosocial involvement than students in 8th, 10th, or 12th grades..

Table 12. Percentage of students with CTC protective factor scores at/below (low protection) or above (high protection) the national standard#

		Grade			
		6th	8th	10th	12th
Community Domain					
Community rewards for prosocial involvement	Low protection	63.8	68.7	66.7	66.1
	High protection	36.2	31.3	33.3	33.9

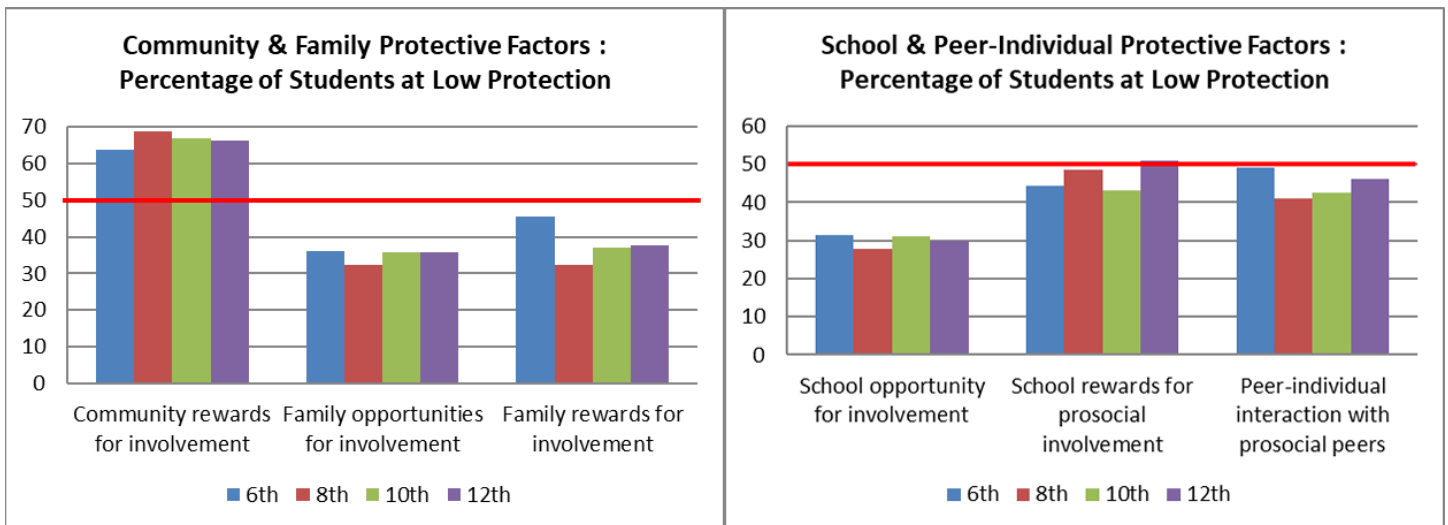

Figure 15. CTC protective factors

Consequences of Use

Research has shown that prevention and/or reduction of alcohol and drug use among student populations leads to a decrease in related problems (Hingson, et al., 1996; Wodarski, 1988). Communities are better positioned to address substance use if they understand the relationship of that use to school-related consequences, such as poor performance on tests or missing school.

The percentages of respondents who reported specific school-related consequences of alcohol or other drug use are shown for each grade in Table 13. The prevalence of having performed poorly on a test or project increased from 7th to 9th grade and then decreased through 12th grade. The prevalence of having missed class increased relatively consistently from 7th to 12th grade. These items were not included on the 6th-grade instrument.

Table 13. *Potential consequences of ATOD use*

		Grade					
		7	8	9	10	11	12
Performed poorly on a test or project	%	3.9	4.2	4.5	4.4	4.0	3.5

Substance Abuse Problems

About the CRAFFT Screening Instrument

The CRAFFT screening instrument may be used clinically to detect whether an individual is likely to have problem use or a substance use disorder (Knight, Shrier, Bravender, Farrell, Bilt, et al., 1999). The purpose of including the CRAFFT in the *Indiana Youth Survey* is to measure the prevalence of substance use-related problems among adolescents. This has been done previously with an adolescent population in Ontario, Canada (Adlaf & Paglia-Boak, 2007). When included in a statewide survey, the CRAFFT may provide a broad-spectrum assessment of likely risk level associated with adolescent substance use (Agle, Gassman, Jun, Nowicke, & Samuel, 2015).

Screening instruments, such as the CRAFFT, cost little to administer but do a good job of identifying people who are at risk for having a disorder. If someone were to screen positive on the CRAFFT in a clinical setting, the clinician would likely

refer the patient for a more resource-intensive assessment to diagnose substance use disorder. In the case of substance use disorder, the criteria for such an assessment are specified in the Diagnostic Statistical Manual (DSM-V).

While many validated substance use screening tools exist, such as the CAGE, AUDIT, and DAST, current evidence favors either the CRAFFT or a revised AUDIT for adolescent populations (Mitchell, Gryczynski, O’Grady, & Schwartz, 2013; Harris, Louis-Jacques, & Knight, 2014). Given that the AUDIT only assesses alcohol use and the CRAFFT assesses alcohol and other substance use, this survey utilizes the CRAFFT.

The CRAFFT has six items; these are presented in Table 14. Response options for each are limited to “yes” and “no.” The items in the CRAFFT scale reflect consequences, patterns, and rationales of use. Affirmative responses to two or more CRAFFT items constitute a positive screen (Knight, Sherritt, Harris, Gates, & Chang, 2003). The CRAFFT was validated for use with people aged 14 to 19 (Knight, Sherritt, Shrier, Harris, & Chang, 2002).

What the CRAFFT Measures

We emphasize strongly that **the CRAFFT does not diagnose a substance use disorder and that the data presented below are not estimates of the prevalence of substance use disorders in Indiana.** However, the results do suggest problem use among those who screened positive. Understanding the prevalence of problem substance use among sub-populations of youth is critical for targeting effective prevention efforts. Selective or indicated prevention strategies are likely to be more appropriate for adolescents who screen positive than are universal prevention approaches.

Results

This analysis included the 68,807 responses from students who were 14 years of age or older for which any of six CRAFFT items were completed, including an affirmative indication that the student had “Never used alcohol or drugs.” Of the responses, 63.4%, or 43,599 youth, had a CRAFFT score of zero; 19.9%, or 13,722 youth, had a CRAFFT score of one; and 16.7%, or 11,486 youth, had a CRAFFT score of two or more.

Table 14 presents the percentages of all respondents ages 14 and older who responded “yes” to each of the CRAFFT items. Results for individual CRAFFT items by grade of respondent are presented in the tables section of this report.

Table 14. Percentage of respondents, aged 14 or older, indicating “yes” for each of the CRAFFT items (n = 68,807)

Item	%
Have you ever ridden in a car driven by someone (including yourself) who was high or had been using alcohol or drugs?	28.5
Do you use alcohol or drugs to relax, feel better about yourself, or fit in?	13.0
Do you ever use alcohol or drugs while you are alone?	12.3
Do you ever forget things you did while using alcohol or drugs?	8.6
Do your family or friends ever tell you that you should cut down on your drinking or drug use?	3.7
Have you ever gotten into trouble while you were using alcohol or drugs?	6.1

Table 15 shows a breakout of CRAFFT scores by respondent’s age. A Pearson’s Chi-Square test indicated significant differences exist among age groups for the scores ($p < .001$). The prevalence of a score of two or greater was higher for older respondents.

Table 15. CRAFFT scores of respondents (percentages by age)

CRAFFT Score	Age of respondent (number (n) of respondents in each group)				
	14 (n=18,171)	15 (n=15,766)	16 (n=14,983)	17 (n=11,790)	18+ (n=8,097)
0	70.1	65.0	61.3	58.2	56.3
1	20.1	19.9	20.1	19.6	19.8
2+	9.8	15.1	18.6	22.2	23.9

Table 16 presents the CRAFFT results by race and ethnicity for respondents age 14 and older. Race and ethnicity data were collapsed into four categories to facilitate statistical tests of differences among categories. The construction of these categories is explained in the Data section of this monograph (see Tables 27 and 28).

A Pearson’s Chi-Square test of differences indicated significant differences among the four race/ethnicity categories ($p < .001$). Z-tests indicated that fewer Caucasian, African-American, and Other students scored a two or greater on the CRAFFT than Hispanic students ($p < .01$).

Further, the prevalence of a score of two or greater was lower for White and African-American students than for Hispanic and Other students ($p < .001$), and the prevalence of a score of two or greater was lower for White students than for African-American students ($p < .001$).

Table 16. *CRAFFT scores of respondents, aged 14 or older (percentages by race and ethnic group)*

CRAFFT Score	Race or ethnicity (number (n) of respondents in each group)			
	White or Caucasian (n=51,226)	Black or African-American (n=3,640)	Hispanic (any race) (n=7,818)	Other (n=6,045)
0	64.7	56.8	59.1	61.5
1	19.1	26.8	21.2	21.1
2+	16.2	16.5	19.7	17.4

Table 17 shows the CRAFFT results by gender of respondent for respondents ages 14 and older. A Pearson's Chi-Square test indicated significant differences between genders ($p < .001$). Female students were more likely than male students to score a two or greater on the CRAFFT.

Table 17. *CRAFFT scores respondents, aged 14 or older (percentages by gender)*

CRAFFT Score	Gender (number (n) of respondents)	
	Male (n=33,963)	Female (n=34,844)
0	66.1	60.7
1	18.4	21.4
2+	15.4	17.9

Mental Health

Prior research has demonstrated robust relationships between adolescent depression, suicidal behavior, and substance abuse (Esposito-Smythers & Spirito, 2004; Hallfors, et al., 2004; Light, Grube, Madden & Gover, 2003). As a result, the State is trying to better understand the prevalence of mental health concerns among Indiana's youth. Mental health was measured for the past year (12 months) with survey items that asked about "feeling sad or hopeless almost every day for two weeks or more in a row that you stopped doing some usual activities," "serious consideration of attempting suicide," and "making a plan about how you would attempt suicide."

The percentages of respondents who reported mental health concerns are shown in Table 18. YRBS national prevalence rates for Grades 9 to 12 are provided for comparison. Statistically significant differences between Indiana prevalence rates and national prevalence rates ($p < .05$) are highlighted in yellow. Because data for national prevalence rates were collected one year prior to the Indiana Survey data collection, significant caution should be used in interpreting any differences in this section.

In this year’s comparison, the prevalence rates for all mental health measures were lower in Indiana than in the US as a whole for 9th through 12th grades. National data are not available for students in 6th through 8th grades.

Table 18. *Mental health (percentages)*

		Grade						
		6	7	8	9	10	11	12
Felt sad or hopeless for 2+ weeks in a row	IN	24.8	26.2	31.5	32.9	35.1	33.8	31.6
	Nation	--	--	--	40.0	43.1	43.6	37.5
Considered attempting suicide	IN	10.8	15.6	19.5	19.1	20.2	19.1	16.9
	Nation	--	--	--	22.1	23.4	23.1	19.5
Made a plan about attempting suicide	IN	7.6	11.1	14.7	14.3	14.9	14.2	11.7
	Nation	--	--	--	16.3	19.0	18.5	14.2

Note. National data from the 2017 YRBS.

Gambling

As gambling options and venues in the state expand, monitoring the prevalence of gambling activities among children and adolescents is increasingly important for planning prevention efforts. All gambling-related questions asked about behavior and experiences in the past year. The *Indiana Youth Survey* included questions about playing cards, betting on games, betting on sports, buying lottery tickets, gambling in a casino, and playing online for money.

Gambling Behavior

The gambling section now contains a brief explanatory introduction, which reads: “Gambling is playing a game in an attempt to win money (any amount) or something of value (like a video game, bike, iPod). You could gamble on a game or an event. Gambling means you don’t know if you will win or lose.”

The first question asked: “During the past 12 months, how often have you bet/gambled for money or valuables in the following ways? Gambling can be done in a variety of settings, including with family and friends.” The forms of gambling that were referred to in the survey are indicated in Table 19. The prevalence of many types of gambling was either higher in younger grades than in older grades or was relatively flat across grade levels. Notably, the survey identified a sharp increase in lottery gambling among students in 12th grade, who are more likely to be legally able to purchase lottery tickets. In addition, the prevalence rates for most forms of gambling were higher for students in 8th grade than for students in any other grade;

this pattern was also observed in the 2016 and 2017 *Indiana Youth Surveys*.

Table 19. *Gambling behavior by Indiana adolescents in the past year (percentages)*

	Grade					
	7	8	9	10	11	12
Card games	13.0	15.4	15.0	14.2	14.4	15.5
Personal games of skill	25.0	25.9	24.1	20.8	19.2	19.2
Sports	17.7	18.8	18.1	16.4	16.4	16.6
Lottery	9.6	10.6	9.8	9.3	9.6	19.9
Bingo	10.9	9.9	8.5	6.8	6.5	6.4
Online gambling	4.2	4.6	4.5	4.5	4.3	4.3
Personal challenges	27.3	30.3	28.7	25.4	23.3	22.4
Gambled in other ways	10.7	13.2	12.8	12.5	11.2	11.5

It is possible to determine the overall prevalence of gambling behavior using the responses to this question. A student who reported having bet/gambled money in at least one way during the past 12 months was considered to have gambled. Prevalence rates of past-year gambling among 7th- to 12th-grade students ranged from a low of 37.9% (11th grade) to a high of 45.5% (8th grade).

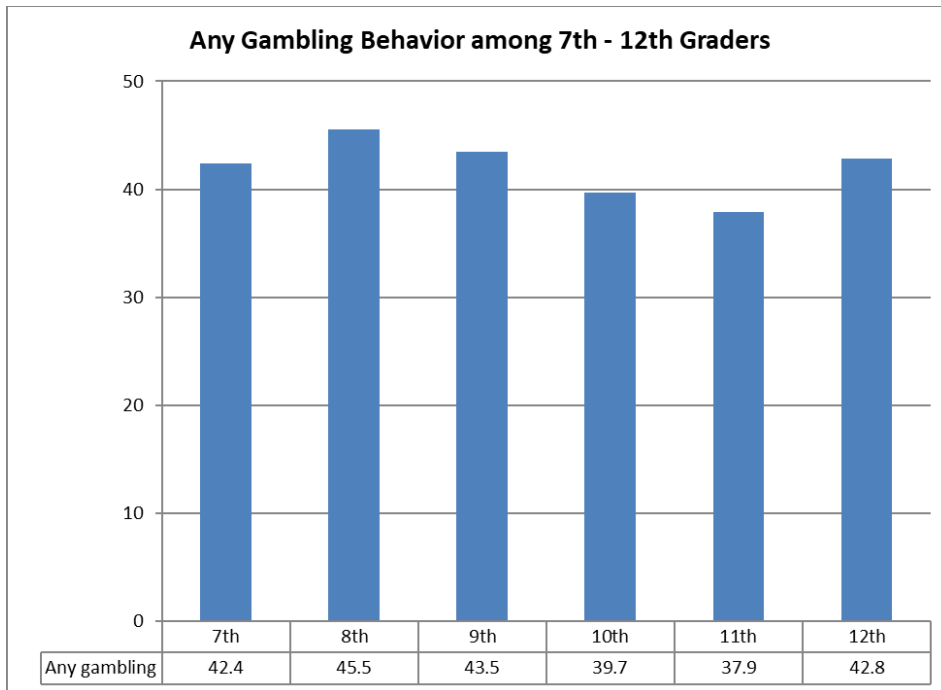

Figure 16. Prevalence rates of any gambling behavior, grades 7 to 12, expressed as a percentage

Consequences of Gambling

The second question asked: “How often have you experienced the following consequences due to your gambling?” The types of consequences listed in the survey are indicated in Table 20.

The prevalence rates for each type of gambling-related consequence were fairly flat across grade levels, with small amounts of variation; in general, students in 8th and 12th grade experienced each consequence the most frequently.

Table 20. *Consequences of gambling by Indiana adolescents in the past year (percentages)*

	Grade					
	7	8	9	10	11	12
Academic problems	19.6	22.6	21.9	21.1	20.8	23.7
Issues with the legal system	19.2	22.3	21.7	20.9	20.8	23.7
Lost possessions or money	20.1	23.2	22.6	21.6	21.3	24.2
Felt bad about gambling	19.3	22.3	21.9	20.9	20.8	23.8
Poor health	19.7	22.6	21.9	21.1	20.9	23.8
Issues with friends and family	20.6	23.3	22.6	21.5	21.1	23.9

Parental Deployment and Incarceration

Research has demonstrated that parental military deployment places youth at increased risk for substance abuse (Fitzsimons & Krause-Parello, 2009) and mental health issues (Reed, Bell & Edwards, 2011). In addition, parental incarceration increases youth and adolescent risk for substance abuse and mental health problems (Murray, Farrington, Sekol & Olsen, 2009). The *Indiana Youth Survey* measured parental deployment and parental incarceration. The percentage of respondents who reported parental deployment and incarceration are shown in Table 21.

Table 21. *Parental deployment and incarceration*

		Grade						
		6	7	8	9	10	11	12
Parents served in a war zone	%	14.0	12.1	10.2	8.9	7.9	6.8	5.7
	N	17,878	16,540	20,013	15,574	17,106	11,815	11,475
Parents served time in jail	%	24.1	24.1	24.0	22.3	21.6	20.1	17.6
	N	17,590	16,380	19,776	15,391	16,925	11,692	11,388

The percentages of youth who reported that one or more of their parents served in the military and in a war zone were highest in Grades 6 and 7 and declined steadily to Grade 12.

The percentages of youth who reported that a parent served time in jail or prison at any time in their life ranged across grade levels from a high of 24.1% in 6th and 7th grades to a low of 17.6% in 12th grade. These relatively high rates of youth that experience parental incarceration reflect in part a 41% increase between 2000 and 2008 in the growth of Indiana's prison population (Pew Report, 2010). Since 2008, the prison population in Indiana has stabilized with minor fluctuations. The total state prison population in 2015 was 3.5% lower than the prison population in 2008 (Carson & Mulako-Wangota, 2017). Of persons in Indiana who entered prison in 2009, two thirds spent less than one year there (Indiana Department of Corrections, 2009).

METHODOLOGY

The methodological history of the *Indiana Youth Survey* can be read in previous reports. All reports published since 1996 can be found at: www.INYS.indiana.edu.

Sample

The sampling frame of the *Indiana Youth Survey* is the universe of all Indiana school corporations and dioceses. The IPRC obtained from the Indiana Department of Education a list of names and addresses of principals and superintendents in all 1,448 public and nonpublic schools that serve 6th- through 12th-grade students in Indiana. In May 2017, invitation letters were sent to all school superintendents and principals. The invitation letters included information on:

- registration;
- sample survey forms;
- parental consent;
- frequently asked questions;
- administering a paper-and-pencil questionnaire or an online survey; and
- adding additional questions.

The corporations and dioceses had at least four months to register for the survey. In order to participate, a school or corporation was required to:

- identify a designated coordinator at each public school corporation or multiple coordinators if schools are scattered in several locations;
- describe its policy on parental consent;
- identify its spring break period;
- identify desired survey administration date(s) ;
- identify whether the paper form or the online survey would be administered and;
- convey the number of students scheduled to participate in each grade level.

Schools were responsible for obtaining parental consent for students to participate in the *Indiana Youth Survey*. Information about whether a particular school or corporation by name has participated in any year may be released upon request from the community. However, school- or corporation-level results from the survey are released to third parties only with the explicit written permission of the school or corporation's survey coordinator or other appropriate authority.

Participation

Since 1993, participation in the *Indiana Youth Survey* has been open to all Indiana school corporations, public and nonpublic. The number of usable surveys, shown in Table 22, has fluctuated from year to year. While it is not possible to explain all of the fluctuation, the causes are likely to include:

- The exclusion from participation of fifth-grade students since 1994;
- The participation of some schools on biennial and triennial bases;
- The arbitrary selection by some schools of the grade levels surveyed;
- Variation in the interpretation of parental consent requirements and;
- The growing length of the *Indiana Youth Survey* instrument.

Table 22. Number of usable surveys (1993-2018)

Year	Usable Surveys	Year	Usable Surveys
1993	90,586	2006	120,914
1994	81,732	2007	158,632
1995	63,631	2008	152,732
1996	36,586	2009	182,496
1997	72,571	2010	169,059
1998	44,232	2011	152,678
1999	81,685	2012	127,061
2000	72,523	2013	117,554
2001	89,861	2014	119,147
2002	77,068	2015	111,585
2003	141,342	2016	107,801
2004	91,577	2017	126,269
2005	136,782	2018	112,240

The rates of participation for school corporations, schools, and students statewide, and for each FSSA Planning Region, are shown in Table 23. ‘Rate of participation’ is the proportion of corporations, schools and students scheduled to participate in the survey out of the entire student population. There is wide variation in rates of participation across regions. The South West Region had the highest rates of participation among corporations (65.6%) and schools (55.1%), while the East Region had the highest participation rate among students (45.8%). The North East Region had the lowest rate of participation among schools (12.1%), while the Central Region had the lowest rate of participation among students (6.7%) and corporations (14.0%).

Table 23. Participation rates for students, schools, and corporations by region

	State	North West	North Central	North East	West	Central	East	South West	South East
Students									
Participants	112,240	17,940	15,117	4,740	10,618	13,436	14,298	15,693	20,398
Total Population	603,089	69,260	84,539	56,323	52,827	201,786	31,197	44,240	62,917
Participation Rate ¹	18.6	25.9	17.9	8.4	20.1	6.7	45.8	35.5	32.4
Schools

¹ The percentage of student participants out of the total population, Grades 6 to 12.

² The percentage of schools that participated out of the total population of schools.

³ The percentage of school corporations that participated out of the total population of school corporations.

Administration of the Survey

Two weeks before the designated survey administration date, the IPRC mailed a packet to participant schools using the paper questionnaire that contained:

- the machine-readable survey forms;
- return shipping labels through the FedEx Package Return Program;
- written instructions for administering the survey, and;
- a link to the survey administration training video (6 minutes 20 seconds) produced by the IPRC.

Participant schools using the online questionnaires were e-mailed the written instructions for administering the survey and a link to the survey administration training video.

The training video describes and demonstrates for school personnel each step of administering the survey to a group of students. The video and the written instructions were provided to improve the consistency of cross-site survey administration. The video is also available for download at www.INYS.indiana.edu.

The written or video documentation included the following instructions for school personnel who administered the survey:

1. Inform students that:
 - their participation in the survey is completely voluntary,
 - the results are confidential, and
 - there are no penalties for deciding not to participate or for not responding to specific items.
2. Students will need about 30 minutes to complete the survey.
3. Remain seated while students fill out the survey.
4. Instruct the students that, when they complete the paper survey, they should place their survey forms into the single envelope that the IPRC has provided and which is labeled with a school and classroom code.
5. For the online survey, set up the computer lab as if you were administering the ISTEP+ test.
6. For the online survey, write the following web address and special School Code and Passcode on the blackboard or another visible place.

Website: www.INYS.indiana.edu

School Name	School Code (8 digits)	Passcode (4 digits)
School	05050001	8371
School	05050002	8371
School	05050003	8371

7. Make sure that all students have access to the survey website.

Indiana Youth Survey staff members are available to provide support and answer questions through a toll-free 800 telephone number from Monday through Friday. Schools had a ten-week window to administer the surveys between January 29 and April 8, 2018 and were asked to return the paper questionnaires immediately to the IPRC.

Survey Instrument

Origin and Relevance of the Questions

Year-to-year changes in the *Indiana Youth Survey* instrument are documented in the reports corresponding to the years in which they occur. In general, survey items have been derived from a variety of sources for purposes of comparability with national and other state survey data. All items use multiple choice response options.

The mental health items pertaining to feeling sad and hopeless and to suicidal behaviors have their origin in the YRBS (CDC, 2014). The items on parental service in the military and incarceration are modified from the Behavioral Risk Factor Surveillance System (CDC, 2011).

Alcohol and drug use prevalence items were based on those in the MTF (Johnston, Bachman, & O'Malley, 1989), conducted by the University of Michigan. The *Indiana Youth Survey* asked respondents in Grades 7 to 12 about their use of 17 different types of drugs or drug classifications and one fake drug, Vivoxiline, which was added to facilitate the error-check protocol (see the *Indiana Youth Survey* instrument in the appendix). Students in 6th grade were asked about their use of six different types of drugs or drug classifications and the fake drug Vivoxiline. In some instances, examples and/or slang descriptions appeared in parentheses next to the name of the drug or drug classification. The purpose of this was to elicit responses about the use of a single substance that might be a common ingredient in multiple products (i.e., alcohol in beer, wine, and liquor) or that might have multiple common names, some of them distributed geographically within the state. Other examples include "MDMA," "Molly" and "X" for ecstasy, and "meth," "crank," and "crystal" for methamphetamine.

Prevalence of alcohol, tobacco, and a variety of other drug use is a primary focus of the *Indiana Youth Survey*. Prevalence refers to the rate of total cases of a condition in a population. For the *Indiana Youth Survey*, three types of prevalence data were collected for ATOD use. Definitions for the various prevalence-of-use measures used in this report are listed below.

Lifetime prevalence: the *Indiana Youth Survey* asked the question 'At what age did you first use...?' for each of the seventeen (7th to 12th grade) or six (6th grade) substances in the survey. One response option for each substance was 'Never Used.' Lifetime prevalence for each substance can be calculated as binary data, with all individuals reporting any age of initiation effectively reporting lifetime use of that substance, and those reporting 'Never Used' effectively reporting no lifetime use.

Current use or monthly prevalence: the percentage of respondents who reported using a particular substance at least once in the 30 days prior to the administration of the survey.

Binge drinking prevalence: the percentage of respondents who reported drinking at least five alcoholic drinks in a row in the two weeks prior to administration of the survey.

The item set for age of first use is similar to that in the National Household Survey on Drug Abuse. However, in the *Indiana Youth Survey*, these items are closed ended. The 'access to alcohol' items have origins in the YRBS.

The ‘perceived risk of harm’ items have origins in both MTF and the National Survey on Drug Use and Health. They are performance measurement requirements for SAMHSA Drug-Free Communities (DFC) Support Program grantees, with some of them comprising a Communities that Care (CTC) risk factor scale. The ‘perceived parental disapproval’ and ‘perceived peer disapproval’ items also are required by DFC grantees. Some of the parental disapproval items make up two separate CTC risk factor scales.

Other items from the CTC Survey (SAMHSA, 2009) belong to one of four categories of influence: Family, Community, Peer-Individual, and School. An example of an item from the Family category is, “How wrong do your parents feel it would be for you to drink beer, wine or hard liquor (vodka, whiskey, or gin) regularly (at least once or twice each month)?” An item from the Community category is, “How easy is it to get cigarettes, smokeless tobacco, cigars, or other tobacco products?” An item from the Peer-Individual category is, “What are the chances you would be seen as cool if you smoked marijuana?” An example from the School category is, “How important do you think the things you learn in school are going to be for you later in life?”

The *Indiana Youth Survey* originally added gambling items in 2005. Those core items were taken from the Minnesota Student Survey (Stinchfield, Kushner, & Winters, 2005; Winters & Anderson, 2000). In 2015, the Indiana Problem Gambling Awareness Program provided updated questions that more specifically addressed the needs of problem gambling prevention in Indiana.

Data

The IPRC entered the *Indiana Youth Survey* data from the paper questionnaires in-house using Pearson optical scanner equipment. The data were cleaned using multiple criteria. A survey could be eliminated from the analysis for either eight (6th grade) or nine (7th through 12th grades) reasons, which are described on the subsequent pages. Tables 24 and 25 show the frequency and proportion of surveys eliminated for these reasons.

Table 24. Reasons for excluding respondents from the analysis for 6th grade students

	Paper		Online		Total	
	N	%	N	%	N	%
Rejected questionnaires						
Blank surveys/Refused to participate	52	1.0	73	0.5	125	0.7
Not truthfully at all response	35	0.7	82	0.6	117	0.6
Indicated fictitious drug (vivo) use	33	0.6	57	0.4	90	0.5
Rejected by gender check	143	2.7	33	0.2	176	0.9
Rejected by grade check	50	0.9	76	0.6	126	0.7
Rejected by age and onset age check	3	0.1	12	0.1	15	0.1
Rejected by consistent use check	0	0.0	0	0.0	0	0.0
Rejected by dose check	0	0.0	3	0.0	3	0.0
Total number of usable questionnaires	5,066	94.1	13,219	97.5	18,285	96.5
Total	5,382	100.0	13,555	100.0	18,937	100.0

Table 25. Reasons for excluding respondents from the analysis for 7th - 12th grade students

	Paper		Online		Total	
	N	%	N	%	N	%
Rejected questionnaires						
Blank surveys/Refused to participate	1,881	5.8	302	0.4	2,183	2.2
Not truthfully at all response	691	2.1	1,505	2.2	2,196	2.2
Indicated fictitious drug (vivo) use	491	1.5	679	1.0	1,170	1.2
Rejected by gender check	732	2.2	177	0.3	909	0.9
Rejected by grade check	219	0.7	158	0.2	377	0.4
Rejected by grade and age check	28	0.1	112	0.2	140	0.1
Rejected by age and onset age check	20	0.1	80	0.1	100	0.1
Rejected by consistent use check	0	0.0	2	0.0	2	0.0
Rejected by dose check	9	0.0	13	0.0	22	0.0
Total number of usable questionnaires	28,471	87.5	65,484	95.6	93,955	93.0
Total	32,542	100.0	68,512	100.0	101,054	100.0

The following criteria were used to clean the 2018 *Indiana Youth Survey*. As noted, eight conditions were used to clean the 6th grade data, and a ninth condition (Implausible Age and Grade Combination) was used to clean the 7th to 12th grade survey.

Condition 1: Blank Surveys

- 6th Grade Instrument: There were a total of 80 questions on the 6th grade instrument, including five questions that asked about students' demographic

information. Cases where students provided five or fewer responses were eliminated from the data analyses.

- **7th to 12th Grade Instrument:** There were a total of 177 questions on the 7th to 12th grade instrument, including five questions that ask about students' demographic information. Cases where students provided five or fewer responses were eliminated from the data analyses.

Condition 2: Truthfulness

- The final item of both survey instruments asked students, “How truthfully have you answered these questions?” The response options for this question were, (a) Not truthfully at all; (b) Somewhat truthfully, and (c) Completely truthfully. Cases where students responded ‘Not truthfully at all’ were eliminated from the analyses. Additional details about the regional distribution of responses to this question are located in Table 26. Variation ranging from 1.5% to 2.4% was observed cross-regionally in terms of students who responded that they did not complete the instrument truthfully at all.

Table 26. Response to item on truthful completion of the Indiana Youth Survey by region

Region	No Answer		Not Truthfully at all		Somewhat Truthfully		Completely Truthfully		Total
	N	%	N	%	N	%	N	%	N

Condition 3: Vivoxiline (Vivo) Use

- There were two items on both survey instruments that asked about “Vivoxiline (Vivo) use”: during the past 30 days and age of first use. The drug is fictitious and was created to check the validity of students' responses. Cases where students reported any use were eliminated from the data analyses.

Condition 4: Missing Gender Information

- Cases where students did not provide an answer to the gender question were eliminated from the data analyses.

Condition 5: Missing or Invalid Grade Information

- 6th Grade Instrument: Cases where students reported being in 5th, 7th, or 8th grade were eliminated from the data analyses, as were cases where students did not provide an answer to the grade question.
- 7th to 12th Grade Instrument: Cases where students reported being in 6th grade were eliminated from the data analyses, as were cases where students did not provide an answer to the grade question.

Condition 6: Implausible Age and Grade Combination

- 7th to 12th Grade Instrument (Only): Cases where a student's combination of grade and age were implausible (e.g., a 10-year-old in the 12th grade) were eliminated. The following ranges were considered plausible:
 - 7th grade: 11 through 15 years old;
 - 8th grade: 12 through 16 years old;
 - 9th grade: 13 through 17 years old;
 - 10th grade: 14 through 18 years old;
 - 11th grade: 15 years or older;
 - 12th grade: 16 years or older.

Condition 7: Implausible Age and Onset Age Combination

- If a student indicated an age of first use for any substance that was higher than the student's current age, that case was eliminated from the analyses.

Condition 8: Substance Use Inconsistencies

- 6th Grade Instrument: The consistency of responses between 30-day use and age of first use of substances was checked. There were six substances that were queried for both 30-day use and age of first use: cigarettes, alcohol, marijuana, inhalants, prescription drugs, and other illegal drugs. Responses were considered inconsistent if students answered "never" to age of first time use of a substance, but indicated use of the substance in the past month. Surveys with four or more inconsistent responses were eliminated from the data analyses. Surveys with fewer than four inconsistencies were kept in the dataset but the inconsistent responses were set to missing.
- 7th to 12th Grade Instrument: The consistency of responses between 30-day use and age of first use of substances was checked. There were 17 substances that were queried for both 30-day use and age of first use: cigarettes, smokeless tobacco, cigars, pipe, electronic cigarettes, alcohol, marijuana, synthetic marijuana, cocaine/crack, inhalants, methamphetamine, heroin, hallucinogens, prescription painkillers, prescription stimulants, prescription sedatives, and over-the-counter drugs. Responses were considered inconsistent if students answered "never" to age of first time use of a substance, but indicated use of the substance in the past month.

- In addition, the consistency of responses among binge drinking, 30-day use, and age of first use of alcohol was checked. If a student reported binge drinking in the past two weeks, but reported “0 occasions” of 30-day alcohol use or responded “never” to age of first use of alcohol, the response was considered inconsistent.
- Surveys with 14 or more inconsistent responses were eliminated from the data analysis. Surveys with fewer than 14 inconsistencies were kept in the dataset but the inconsistent responses were set to missing.

Condition 9: Pharmacological Implausibility

- **6th Grade Instrument:** The over-reporting of substance use was examined through patterns of responses that are pharmacologically implausible. Past-month use of the following substances was examined: alcohol, marijuana, inhalants, prescription drugs, and other illegal drugs (cigarettes were not included). Cases where students reported using a substance “40 times or more” for three or more substances were eliminated from data analyses.
- **7th to 12th Grade Instrument:** The over-reporting of substance use was examined through patterns of responses that are pharmacologically implausible. Past-month use of ten substances was examined (cigarettes, smokeless tobacco, cigars, pipe, and electronic cigarettes were not included). Cases where students reported using a substance “40 times or more” for five or more substances were eliminated from data analyses. Further, cases where the summed score from all ten substance use questions exceeded 28 were not included in the data analyses (where 0=never; 1=1-5 times; 2=6-19 times; 3=20-39 times; 4=40+ times).

Demographics

Respondent demographics are shown in Table 27 according to gender, race/ethnicity and grade level. Respondents were asked separate questions about race and Hispanic ethnicity. To facilitate statistical tests of differences among categories, we combined these results to create four categories: Non-Hispanic White or Caucasian, Non-Hispanic Black or African-American, Hispanic Ethnicity (any race), and Other. “Other” included all other respondents, including: (1) all non-Hispanic non-Whites and non-Blacks, including the response categories of Asian, Native Hawaiian or Other Pacific Islander, American Indian or Alaska Native, More than one race, Race not known or other; and (2) respondents who indicated non-Hispanic ethnicity but did not respond to the question on race (see Table 28).

Table 27. *Demographic characteristics of the participants*

	N	%
Gender		
Male	55,501	49.4
Female	56,739	50.6
Grade		
6	18,285	16.3
7	16,734	14.9
8	20,260	18.1
9	15,824	14.1
10	17,408	15.5
11	12,093	10.8
12	11,636	10.4
Race/Ethnicity		
White	80,666	71.9
Black	6,492	5.8
Hispanic	13,201	11.8
Other (see Table 28)	11,684	10.4
No answer	197	0.2

Table 28. *Components of race/ethnicity category “Other”*

Race	Ethnicity	
	Non-Hispanic	No Answer
White	(see Table 27)	1,552
Black or African-American	(see Table 27)	260
Asian	1,684	43
Native Hawaiian or Other Pacific Islander	159	3
American Indian or Alaskan Native	688	24
More than one race	5,334	247
Race not known or other	868	76
No answer	746	(see Table 27)

Reliability

Reliability is an estimate of how consistently survey items measure the same concept each time they are administered under the same conditions and with the same subjects. Internal reliability coefficients describe the consistency of results across sets of items (Fink, 1993). Internal reliability coefficients (i.e. Cronbach’s alpha) based on the average correlation among item sets are shown in Tables 29 and 30. Alpha coefficients range in value from 0 to 1. The higher the score is, the more reliable the item sets are. Nunnally (1978) has indicated 0.7 to be an acceptable reliability coefficient, and many researchers require at least 0.8 for a “good scale.” Based on these criteria, the internal reliability of the risk and protective factor item sets contained in the *Indiana Youth Survey* ranges from acceptable to excellent. The 6th grade survey had lower internal reliability than the 7th to 12th grade survey. Two

scales on the 6th grade survey had slightly lower than acceptable internal reliability ratings, including family opportunities for prosocial involvement and interaction with prosocial peers. However, all of those scales had Cronbach's alpha ratings higher than .650. Furthermore, only one scale on the 7th to 12th grade survey, low school commitment, had lower than acceptable internal reliability (i.e., .662). This indicates that the item sets are generally consistent measures of the risk and protective factor concepts in the *Indiana Youth Survey*.

Table 29. Internal reliability of item sets for the 6th grade survey

Item Set	Example Question Wording	Number of Items	Cronbach's Alpha
Perceived Peer Disapproval	How do you think your close friends feel (or would feel) about you doing each of the following things?	4	.817
Poor Family Management	The rules in my family are clear.	8	.762
Family Conflict	We argue about the same things in my family over and over.	3	.778
Parental Attitudes Favorable to Drug Use	How wrong do your parents feel it would be for you to...	3	.700
Perceived Risk of Drugs	How much do you think people risk harming themselves (physically or in other ways) if they...	6	.906
Community Rewards for Pro-social Involvement	My neighbors notice when I am doing a good job and let me know.	3	.892
Family Opportunities for Pro-social Involvement	My parents ask me what I think before most family decisions affecting me are made.	4	.709
Family Rewards for Pro-social Involvement	Do you enjoy spending time with your mother?	5	.705
School Opportunities for Pro-social Involvement	In my school, students have lots of chances to help decide things like class activities and rules.	4	.738
School Rewards for Pro-social Involvement	My teacher(s) notices when I am doing a good job and lets me know about it.	5	.698
Interaction with Pro-social Peers	Think of your four best four friends (the friends you feel closest to). In the past year (12 months), how many of your best friends have ...	5	.698

Table 30. Internal reliability of item sets for the 7th -12th grade survey

Item Set	Example Question Wording	Number of Items	Cronbach's Alpha
Perceived Peer Disapproval	How do you think your close friends feel (or would feel) about you doing each of the following things?	4	.871
Community Law and Norms Favorable to Drug Use	These questions ask about the neighborhood and community where you live.	7	.880
Perceived Availability of Drugs	How easy would it be for you to get...?	4	.845
Poor Family Management	The rules in my family are clear.	8	.857
Family Conflict	We argue about the same things in my family over and over.	3	.860
Parental Attitudes Favorable to Drug Use	How wrong do your parents feel it would be for you to...	3	.782
Parental Attitudes Favorable to Anti-social Behavior	How wrong do your parents feel it would be for you to...	3	.767
Low School Commitment	Now thinking back over the past year in school, how often did you...	3	.662
Early Initiation of Drug Use†	If you have ever used these drugs, at what age did you first use them?	3	.705
Peer Attitudes Favorable to Drug Use	How wrong do you think it is for someone your age to...?	4	.825
Perceived Risk of Drugs	How much do you think people risk harming themselves (physically or in other ways) if they...	6	.870
Community Rewards for Pro-social Involvement	My neighbors notice when I am doing a good job and let me know.	3	.937
Family Opportunities for Pro-social Involvement	My parents ask me what I think before most family decisions affecting me are made.	3	.767
Family Rewards for Prosocial Involvement	Do you enjoy spending time with your mother?	4	.796
School Opportunities for Pro-social Involvement	In my school, students have lots of chances to help decide things like class activities and rules.	5	.775
School Rewards for Prosocial Involvement	My teacher(s) notices when I am doing a good job and lets me know about it.	4	.812
Interaction with Prosocial Peers	Think of your four best four friends (the friends you feel closest to). In the past year (12 months), how many of your best friends have ...	5	.797

Notes. † The scale is missing one item out of four items from the original CTC scale.

Validity

The validity of a survey is the extent to which it measures what its designers intend it to measure (Fink, 1993). The *Indiana Youth Survey* is intended to measure the reported prevalence of substance use, the consequences of use, perceptions of peer approval of substance use, perceptions of personal safety, prevalence of gambling, and other concepts. The *Indiana Youth Survey* measures these concepts among children and adolescents in Grades 6 through 12 located in schools across Indiana at a given point in time. Historically, the *Indiana Youth Survey* has used a nonrandom (convenience) sampling procedure, which presented a threat to the survey's external validity (e.g., the ability to generalize the results to students who did not complete the survey). A nonrandom procedure was used because a longstanding priority of the

Indiana Youth Survey has been to provide local level data to any and all schools or school corporations that request it. While the results reported in this section should be interpreted with this consideration in mind, this year, for the second time, the *Indiana Youth Survey* also administered the survey to a random sample of schools. Those results are reported in a subsequent section and provide data that more readily can be generalized to the entire state. The randomly-sampled data are reported separately because they are not appropriate for the type of trend analyses provided in this section of the monograph.

To the extent that school districts have obtained information from every student in a particular grade level, the local results represent those community populations. In this respect, participating school districts can examine their own student response rates and decide how representative their survey data are for their local youth population. Formula 1 shows how the student response rate may be calculated from data in the local report provided to each participating school or school district.

Formula 1

$$\text{Response Rate} = \left(\frac{\text{Number of Respondents}}{\text{Total Number of Students}} \right) \times 100$$

Where “Number of Respondents” is the number of students who completed and turned the survey in, and where “Total Number of Students” is the number of students whom the school corporation intended to survey.

If the response rate is 90% or greater, then the district level results (not shown in this report) are likely to be representative of the local student population.

At the sub-state regional levels, the ability to generalize the data is much lower because many school districts, and therefore many children and adolescents in the regional populations, did not participate in the *Indiana Youth Survey*. As shown in Table 23, only 6.7 to 45.8 percent of students participated in the *Indiana Youth Survey* across regions. The best approach to address this limitation is to assess the extent to which the samples of student respondents compare to the entire population of students in each region. This comparison of regional respondents and the population is shown by gender, ethnicity, race, and grade level in Table 31. Although this comparison does not provide a basis for generalizing results at the regional level, it provides guidance on where the data do and do not coincide proportionally with demographic subgroups in the regional populations.

As shown in Table 31, the majority of samples either under or over-represent the proportions of students by gender, ethnicity, race, or grade level in a region. For example, in the North Central region, females are overrepresented in the *Indiana Youth Survey* sample and White students are overrepresented. This means that the

sample from this region has proportionally more females and fewer White students than the North Central region as a whole, and these biases should be taken into consideration when interpreting the results of the *Indiana Youth Survey* data.

* The sample is significantly different from the population (p<.05).

Missing responses are not included in calculations of the percentages for the sample.

The strength of this section of the *Indiana Youth Survey* is that it collects and reports valid and reliable data for local school corporations. At the state level, the data has the same degree of reliability. However, according to sampling theory, the state-level data in this section are less valid (Levy & Lemeshow, 2003). This tradeoff

reflects the state's current priorities for serving the substance use prevention needs of local communities. At the same time, statewide results from the *Indiana Youth Survey* and the newly-collected random sample within the survey have a high degree of concurrence. Due to this level of agreement, it is reasonable to compare the statewide *Indiana Youth Survey* data with national survey results. Furthermore, the level of agreement between the convenience sample data and random sample data at the state level reinforces our confidence in the validity of *Indiana Youth Survey* data for this and previous years of administration.

HOW TO INTERPRET THE RESULTS

Comparison of Regional Data

For the regional data tables, the symbols ▲ or ▼ are used to indicate statistically significant regional differences in prevalence of use compared to the entire state. The ▲ symbol indicates that the regional rate is higher than the state rate, and the ▼ symbol indicates that the regional rate is lower than the state rate.

Generalizing Local Indiana Youth Survey Data to Local Populations

The IPRC provides each participant school corporation with a local report of the *Indiana Youth Survey* results from its district. This section describes the method for estimating how well local data applies to local populations. The IPRC strongly encourages school corporations to share the results of this analysis with citizens and organizations engaged in local surveillance and planning.

The Response Rate

The response rate estimates how well the local results of the *Indiana Youth Survey* describe all the youth in a grade or grades, in a school or schools, or in an entire school corporation.

If the response rate is 90 percent or greater, then the results are likely to be representative of the population defined. If the response rate is lower than 90 percent, the results should be interpreted cautiously. In this case, the results might not be representative of students who were absent the day the survey was administered or of those who did not turn in a survey.

In any case, results do not generalize to those whose responses the IPRC systematically excluded from tabulation (see the “Data” section, above, for details).

The IPRC is unable to calculate the response rate for individual localities because one of the components of the response rate depends on information not collected along with the survey. This information, the Total Number of Students, is explained below.

Two pieces of information are required to calculate the response rate: “the total number of students” and “the total number of respondents.”

The Total Number of Students

The total number of students can only be determined by each school district.

The total number of students is the number of students that the school district intended to survey. For instance, if the intention was to survey all 9th- and 10th-grade students in all schools then the total enrollment number in Grades 9 through 10 would constitute the total number of students.

Total Number of Respondents

Local reports of the *Indiana Youth Survey* issued to participating school corporations include a table similar to Table 32. The asterisk (*) in Table 32 illustrates where to locate the total number of respondents.

Table 32. *Sample table from local report*

	Frequency	Percent
Rejected questionnaires		
Blank surveys/Refused to participate		
Not truthfully at all response		
Indicated fictitious drug (vivo) use		
Rejected by gender check		
Rejected by grade check		
Rejected by grade and age check		
Rejected by age and onset age check		
Rejected by consistent use check		
Rejected by dose check		
Total Number of Usable Surveys		
Total	#,### *	100.0

Calculating the Response Rate

To determine the response rate for a locality, divide the Total Number of Respondents by the Total Number of Students and multiply the result by 100.

$$\text{Response Rate} = \left(\frac{\text{Number of Respondents}}{\text{Total Number of Students}} \right) \times 100$$

Practical Significance

The local report contains a section titled *Prevalence Rates for Alcohol, Tobacco and Other Drug Use*. In this section the percentage of student participants who reported that they used specific drugs during the past month is presented. These rates are shown for the school district over a ten year period if such data are available.

Targeting prevention efforts at particular drugs might be appropriate even though local prevalence rates are not higher than those of the state. For instance, if sixth-grade students in a corporation had a prevalence rate similar to that of the state for a specific drug, but the rate itself was high, prevention or treatment programs might be needed for 6th-grade students.

Key points for interpreting prevalence rate results of the *Indiana Youth Survey*:

- Monthly prevalence is a general indicator of frequent or regular use of a drug.
- “Prevalence” indicates any use of a drug within the specified time frame, regardless of its severity or frequency within that time frame (for example, any use of marijuana in one’s lifetime could be one time or two hundred times). Use monthly prevalence rates in conjunction with detailed frequencies of use (for example, 1-5 times, 6-19 times, 20-40 times, more than 40 times) that are provided in tables in the Frequencies section at the back of a local report.

RANDOM SAMPLE

This year, for the second time, the *Indiana Youth Survey* conducted a randomly-sampled survey alongside the annual survey. This methodology produces data that more confidently can be generalized to (e.g., assumed to be true for) the youth population of Indiana as a whole (Kelley, Clark, Brown, & Sitzia, 2003). This section explains how the data were collected for the random sample, and then highlights selected findings and the extent to which data from the random sample and the annual survey correspond.

Sampling Methodology

There are a variety of ways in which random sampling can be accomplished. In this case, the sampling design was created based on recommendations from the Indiana University Center for Survey Research (CSR). These recommendations were developed based on standardized best practices in survey sampling, a comprehensive review of sample designs for 19 statewide substance use surveys conducted in the United States from 2002 to 2013, and extensive discussion and information sharing between CSR and the IPRC's Survey Enhancement Team.

This section of the document addresses the target population, sampling frame, sampling method, and sample size determination.

Target Population

The target population is the group to which the survey is intended to be generalized. In other words, a randomly-sampled survey allows one to draw conclusions that are likely to be true about a group of individuals. The group that is selected is called the 'target population.' The following three bullet points outline the criterion for being part of the target population:

- The target population for the INYS probability sample was all currently-operating public schools in Indiana. It did not include private schools. It included charter schools but did not include other types of schools (e.g., vocational, corrections, special education). This is in line with the analytic objectives of the survey and practice in other statewide substance use surveys.
- Only students in 6th, 8th, 10th, and 12th grades were included in the target population. These grades were of primary interest in meeting the survey's analytic goals.
- In line with common practice in school-based sampling, only schools with at least 15 students in at least one of the eligible grades (6th, 8th, 10th, and 12th) were included in the target population. Using 2015-16 data from the Indiana

Department of Education (IDOE), we noted few schools had fewer than 15 students in grades 6, 8, 10, and 12. A number of these also appeared to be schools (e.g., vocational, corrections, special education) that were likely to be excluded due to the prior target population criteria.

Sampling Frame

The sampling frame is used to identify the target population from which participants randomly are selected. In this case, the basic sampling frame was the IDOE school enrollment file, which contained all schools recognized by IDOE during the current academic year.

- This file was supplemented by information from the National Center for Education Statistics Common Core of Data (CCD) file (NCES, 2016). The CCD file is the Department of Education's comprehensive database of U.S. public elementary and secondary schools, which is updated annually through the School Universe Survey. The CCD serves as the sampling frame for school-based surveys conducted by the National Center for Education Statistics. This file allowed IPRC to eliminate from the sampling frame the schools that were not part of the target population, since, as of this year, special education and vocational schools cannot be easily identified in the IDOE file.
- In total, applying the target population criteria (see previous section), the sampling frame included 1,096 schools.

Sampling Method

The sampling method is the specific way that participants (e.g., schools) are selected.

- The 2018 *Indiana Youth Survey* utilized probability proportion to size (PPS) sampling. PPS is a sampling procedure in which the probability of a unit being selected is proportional to the size of the unit. The result is that larger schools have a higher probability of selection and smaller schools have a lower probability. The PPS approach can improve accuracy for a given sample size by concentrating a sample on large elements that have the greatest impact on population estimates. PPS sampling is commonly used for surveys of schools where school sizes (i.e., enrollment numbers) vary greatly.
- The PPS sample was stratified by grade and FSSA planning region.

Sample Size Determination

Sample size calculations for this type of work utilize standardized formulae (e.g., Levy & Lemeshow, 2008). Using these formulae, we identified a target enrollment of 938 participants per grade. In order to achieve that target, it was determined that 255 schools would need to be invited to participate in the survey. A variety of factors were estimated or measured in order to identify these target numbers.

- The targeted margin of error was set at 3% and the targeted confidence level

was set at 95%.

- The margin of error is the extent to which we expect our results to deviate from the true population value. For example, if it were somehow possible to conduct a comprehensive census to determine that 33% of all Indiana 12th grade students drank alcohol in the past 30 days, and our randomly-sampled survey has a margin of error of 3%, then we would expect the survey to produce a result for that question between 30% and 36%, which is +/- 3% from the true value. Since it is not feasible to measure the total population, we never know the ‘true’ value. Instead, what we report is the value calculated by the survey, and the range (lower level and upper level) within which we are confident the true population value lies.
- The confidence level is the likelihood that the randomly-sampled survey will produce a range of values (the measured value +/- the margin of error) within which the true population value lies. A confidence level of 95% means that if we sample the same population 100 times, for 95 of those times the true value will be within the indicated margin of error.
- With a margin of error of 3% and a confidence level of 95%, we can conclude that there is a 95% chance that the true value of the entire population for any given question falls within 3 percentage points of the value reported by the randomly-sampled survey.
- Total number of students (state-wide) in the eligible grade (6th, 8th, 10th, or 12th) with the highest enrollment: 74,731.
- Estimate of interest: Past-30-day alcohol use (12th grade) was estimated to be 33.4% based on the results of the *2016 Indiana Youth Survey*’s random sample.
- Factor of sample size increase needed to account for design effect and loss due to weighting: 5 times.
- Percent of surveys failing to meet checks to be included in final survey dataset: 8%.
- Percent of students consenting and participating in survey at participating schools: 70%.
- Percent of sampled schools that would participate in survey: 40%.
- Average number of students in all eligible grades per school: 283.
- Given all of these assumptions and a total population of 1,096 schools, 255 schools were invited to participate, of which 106 did.

Table 33. Target population according to region and eligible grades within the school (n=1,096)

Data Weighting

Data weighting is a process whereby raw data are adjusted in such a way that they are better suited to generalization to the target population from which they are drawn. The specific data weighting processes utilized in the *Indiana Youth Survey* were based on methodologies developed by the United Nations (UN, 2005) and Centers for Disease Control and Prevention (CDC, 2015). Unless otherwise noted, specific weighting formulae are drawn directly from the cited documents.

Response Rates

The primary sampling units (PSUs) for the INYS are schools.

$$\begin{aligned} \text{School Response Rate} &= \frac{\text{Number of Schools that Participated}}{\text{Number of Eligible Schools Sampled}} \times 100 \\ &= \frac{106}{225} \times 100 = 41.6\% \end{aligned}$$

A total of 23,874 students were included in the data analyses.

Weighting Procedure

The weighting procedure began with generation of base weights. Schools were selected using probability proportional to size (PPS), with size defined as school enrollment size in the target grades. The school weight was based on the probability of selection for that school.

A base weight was calculated for each school as:

$$\text{Base Weight for School} = \frac{\sum \text{Measure of Size of All Schools in the Sampling Frame}}{N * \text{Measure of Size Assigned to School}}$$

Then, adjustments were made to the base weights to remove bias and reduce variability of the estimates. Three adjustments to the weights were made for the *Indiana Youth Survey*.

1. An adjustment to account for non-response by students in the sample.
2. An adjustment to trim extremely large weights in order to limit the associated variation in the weights.
3. An adjustment to fine-tune the weighted sample estimates to known population characteristics.

Each of these adjustments is summarized below.

The first adjustment was made at the student level and accounts for eligible students

enrolled in sampled schools who did not turn in a usable survey for the following reasons:

- Students who did not receive parental consent.
- Students who were absent on the day the survey was administered.
- Students who refused to participate.
- Students who failed the quality control (cleaning protocol) checks.

Weights of these non-responding students in sampled schools were given to responding students in the same grade in the same school. This non-response adjustment accounted for loss of sampled students in participating schools.

$$\text{Nonresponse Adjustmet} = \frac{\sum \text{Eligible Sampled Students}}{\sum \text{Usable Surveys}}$$

The non-response weights were multiplied by the base weights.

The second adjustment was made to handle extremely large weights after adjusting for non-response weights. Although these extremely large weights affected only a small portion of sampled students, they would have caused a substantial increase in the variance of survey estimates. Therefore, we followed precedent outlined in similar data-weighting processes and trimmed extremely large weights to a maximum value. For the 2018 *Indiana Youth Survey*, the upper bound for the original weights was set at 20.0. Then, the entire set of weights for each stratum was re-scaled so that the sum of the trimmed weights was the same as that of the original weights.

The third adjustment was made to fine tune weighted sample proportions to known population proportions. Post-stratification was used to adjust the weights to two factors of population proportions: (1) grade by gender and (2) race-ethnicity. Population proportions were obtained from the Indiana Department of Education using school enrollment tabulations.

Before post-stratification was conducted, strata with too few participating schools were collapsed into one stratum within the same region. As a result, Northeast region and Central region have only one stratum. In addition, one stratum in the Northwest region had too few participants. This stratum was divided and then merged into three other strata in the same region proportional to the population size by race-ethnicity and by gender-grade levels.

The first post-stratification factor was grade and gender (combinations of males and females in each of grades 6, 8, 10, and 12 for each stratum). The gender by grade adjustment factor was computed as:

$$\text{Race-ethnicity Adjustment} = \frac{\text{Proportion of White, Black, Hispanic, Other in Population}}{\text{Proportion of White, Black, Hispanic, Other in Sample}}$$

The second stratification factor was race-ethnicity. Race-ethnicity was grouped into four categories based on the race-ethnicity distribution in the population: White, Black, Hispanic, and Other. The “Other” category included Asian, Native Hawaiian/Pacific Islander, American Indian/Alaskan Native, and students who reported more than one race or that their race was not known.

There were 39 students who did not provide responses to the race-ethnicity questions. These cases were imputed by replacing missing data with the largest race-ethnicity category for that stratum for the purpose of calculating the post-stratification weights only. These imputed values were not used for further data analyses. The race-ethnicity adjustment factor was computed as:

$$\text{Grade-Gender Adjustment} = \frac{\text{Proportion 6th Male, 6th Female, ..., 12th Male, 12th Female in Population}}{\text{Proportion of 6th Male, 6th Female, ..., 12th Male, 12th Female in Sample}}$$

The final weight for each eligible responding student was computed as:

$$\text{Final Weight} = \text{Base Weight} \times \text{Nonresponse Adjustment Factor} \times \text{Race} \\ - \text{Ethnicity Adjustment Factor} \times \text{Grade} - \text{Gender Adjustment Factor}$$

Variance Estimation

The STATA software package (version 15) was used specifically to compute estimates and variances for the *Indiana Youth Survey*. There was one stratum with only one primary sampling unit. For variance estimation, this stratum with one sampling unit was centered at the grand mean instead of the stratum mean.

Design Effect

The design effect, which is the ratio of the variance of a selected value using the sampling method specified in this section to the variance that would have been computed using simple random sampling, is presented for selected estimates in Table 35. Although lower design effects are generally better, effects under 3 can be considered good and higher effects are frequently reported (Shackman, 2001).

Table 35. *Design effects for selected drug use during the past month*

Estimate	Design Effect	Estimate	Design Effect
Alcohol use for 12th grad-ers	3.11	Alcohol use for 10th grade females	7.42
Marijuana use for 12th graders	2.95	Marijuana use for 8th grade females	2.67
Cigarette use for 6th grade males	2.28	Cigarette use for all 6th, 8th, 10th, 12th combined	5.79
Alcohol use for 6th grade males	1.94	Alcohol use for all 6th, 8th, 10th, 12th combined	4.18

Selected Results

The random sample from the *Indiana Youth Survey* provides results that can be generalized to the entire state of Indiana with increased confidence relative to the convenience sample (the traditional data collection method). However, these data do not, nor are they intended to, provide information on local results or trends (e.g., at the school or school corporation level). The sampling design was specifically structured in order to provide the most accurate state-level data. While the data from the random sample could, in theory, be generalized to regions and even to schools, the confidence intervals would be extremely wide, as the statistical design was optimized for confidence in state-level results. Thus, for local-level results, please continue to utilize the results of the convenience sampling portion of the *Indiana Youth Survey*.

Interpretation of this Section

As noted in the Methodology component of this section, the randomly-sampled survey utilized a 95% confidence interval (abbreviated here as 95% CI). This confidence interval is a range of values extending lower and higher than the measured value within which we are 95% confident the true population value lies.

The margin of error is different for each question. The narrower the margin of error (e.g., the smaller the number), the more precise the survey result is. In Tables 36 through 39, the margin of error can be calculated by subtracting the 95% CI LL from the 95% CI UL and dividing by 2. So, for example, in Table 36, the margin of error for ‘cigarettes’ is $[(8.4-5.9)/2]$, which is 1.25%.

Tables 36 through 39 have four types of columns:

- *Convenience Sample*: this is the number reported in the prior sections of the monograph (e.g., the convenience sample) at the state level for the given grade and question.

- *Random Sample*: this is the number derived from the random sample at the state level for the same grade and question.
- *Random Sample, 95% CI LL*: the lower limit of the 95% confidence interval (the true population value is likely equal to or higher than this number).
- *Random Sample, 95% CI UL*: the upper limit of the 95% confidence interval (the true population value is likely equal to or lower than this number).

Differences between the Convenience and Random Samples

In cases where the value for the convenience sample falls between the random sample's 95% CI LL and 95% CI UL, we are confident that the convenience sample data match the population-level data represented by the random sample. This year, none of the values from the convenience sample fell outside of the random sample's confidence intervals for monthly substance use (as an example, see Table 36). It is important to note that a random sample value, inclusive of the margin of error, is a more accurate state-level estimate than a corresponding convenience sample value. At the same time, there were regions of the state where few schools agreed to participate in the randomly sampled survey. This ultimately led to wider margins of error for some variables (such as Alcohol for 10th grade students; +/- 4.7%). While we are still 95% confident that the true state-level value for Alcohol in 10th grade is within 4.7 percentage points of the measured value (19.3%), these widened margins of error make it more likely that the convenience sample values will fall within the random sample confidence intervals.

Table 36. *Random and convenience sample comparison, percentage reporting monthly use of alcohol, tobacco, and other drugs, Indiana 10th grade students, 2018*

DRUG	Convenience Sample %	Random Sample		
		%	95% CI LL	95% CI UL
Cigarettes	6.8	7.2	5.9	8.4
Smokeless tobacco	3.5	3.9	3.0	4.8
Cigars	3.4	3.6	2.9	4.2
Pipe	2.5	2.9	1.7	4.0
Electronic vapor products	20.4	19.2	13.8	24.6
Alcohol	21.0	19.3	14.6	24.0
Binge drinking [#]	8.5	8.1	6.5	9.8
Marijuana	12.6	12.1	9.3	14.9
Synthetic marijuana	1.0	1.8	0.6	3.1
Cocaine/Crack	0.6	1.4	0.1	2.7
Inhalants	0.7	0.9	0.0	1.7
Methamphetamines	0.3	1.1	0.0	2.6
Heroin	0.1	0.1	0.0	0.1
Hallucinogens/Ecstasy	1.7	2.3	0.9	3.8
Prescription drugs	3.8	4.5	1.8	7.2
Over the counter drugs	3.2	4.1	2.5	5.6

Gambling Behavior

The random sample and the convenience sample were similar across all types of gambling for 8th and 12th grade students. However, the convenience sample produced a prevalence rate for lottery (10th) that exceeded the 95% CI UL from the random sample (see Table 37). At the same time, the margin of error for 10th grade lottery was relatively small (+/- 1.25%). It is not possible to determine the precise cause of this discrepancy.

Table 37. Random and convenience sample comparison, percentage reporting gambling behaviors, Indiana 10th grade students, 2018

Gambling Behavior	Convenience Sample %	Random Sample		
		%	95% CI LL	95% CI UL
Card games	14.2	14.3	12.2	16.3
Personal games of skill	20.8	20.2	18.2	22.3
Sports	16.4	15.7	14.1	17.3
Lottery	9.3	6.9	5.6	8.1
Bingo	6.8	6.5	4.8	8.2
Online gambling	4.5	5.1	2.3	7.9
Personal challenges	25.4	24.8	21.6	28.0
Gambled in other ways	12.5	11.8	8.2	15.4

Note: Yellow highlighting indicates that the convenience sample value exceeds the 95% CI UL.

Risk and Protective Factors

The random sample and the convenience sample were similar across all risk and protective factors for all grade levels (as an example, see Table 38).

Table 38. Random and convenience sample comparison, percentage at high risk (risk factors scales), Indiana 8th grade students, 2018

Risk and Protective Factors	Convenience Sample %	Random Sample		
		%	95% CI LL	95% CI UL
Law and norms favorable to drug use	29.4	31.6	28.8	34.5
Perceived availability of drugs	18.7	18.3	16.2	20.3
Poor family management	23.1	23.9	21.4	26.5
Family conflict	49.9	51.4	48.9	53.8
Parental attitudes favorable towards drug use	16.4	17.3	15.3	19.3
Parental attitudes favorable towards anti-social behavior	42.7	43.2	40.6	45.9
School academic failure	36.2	37.4	33.9	40.9
Low school commitment	50.6	50.8	48.0	53.6
Early initiation of drug use	14.0	13.4	11.0	15.9
Attitudes favorable towards drug use	28.2	28.6	25.7	31.5
Perceived risk of drug use	63.4	65.0	62.2	67.7
Rewards for antisocial involvement	45.6	47.9	44.6	51.3

Past-month Substance Use – 2016 and 2018

Interpretability of trends between different years of the random sample can be difficult. This is because one must consider statistically significant differences in mean values (see Table 39) and the overlap between confidence intervals (see Figures 17 through 19). Even when statistically significant differences are observed between years (see Cocaine/Crack, Methamphetamines, and Hallucinogens/Ecstasy for 10th grade students), it does not necessarily mean that the value for one year is outside of the confidence intervals for a separate year. Thus, we provide example data for 10th grade students but do not otherwise highlight differences in this section.

Table 39. *Monthly use of alcohol, tobacco, and other drugs by 10th graders: Comparisons between 2016 and 2018*

	2016	2018	χ^2	p-value
Cigarettes	7.0	7.2	0.029	.865
Smokeless tobacco	5.3	3.9	1.358	.248
Cigars	3.4	3.6	0.103	.749
Pipe	3.8	2.9	1.304	.257
Electronic vapor products	12.5	19.2	6.703	.012
Alcohol	20.9	19.3	0.323	.572
Binge drinking	7.7	8.1	0.124	.726
Marijuana	12.1	12.1	0.001	.982
Synthetic marijuana	1.7	1.8	0.058	.811
Cocaine/Crack	0.4	1.4	7.243	.009
Inhalants	1.0	0.9	0.070	.793
Methamphetamines	0.2	1.1	9.394	.003
Heroin	0.1	0.1	0.005	.947
Hallucinogens/Ecstasy	1.1	2.3	5.194	.026
Any prescription drugs	3.7	4.5	0.321	.573
Over the counter drugs	3.0	4.1	1.758	.189

Note. Binge drinking measured for the past two weeks, not the past month.
Yellow highlighting indicates a statistically significant difference in mean percentage value.

APPENDIX: INSTRUMENT

2018 INDIANA YOUTH SURVEY

6th GRADE

Thank you for participating in this survey. These questions ask about things concerning you and your family, friends, and community. The survey is taken by students across Indiana. The purpose is to help schools and communities and to support their students' needs.

This is not a test, so there are no right or wrong answers. All of your answers will be kept strictly **confidential**. This means your answers are secret and no teachers will find out what you answered. Your individual answers will never be reported to anyone.

This survey is completely **voluntary**. You can skip any questions that you do not want to answer. If you do not want to participate in this survey, you may leave it blank.

Be sure to read the instructions below before you begin.

MARKING INSTRUCTIONS

- Use a No. 2 pencil only.
- Do not use ink, ballpoint, or felt tip pens.
- Make solid marks that fill the response completely.
- Erase cleanly any marks you wish to change.
- Make no stray marks on this form.

Please enter the school code provided by your teacher.

The following questions ask about your **PERSONAL AND FAMILY INFORMATION.**

1. SEX:

Male Female

2. Are you Hispanic or Latino?

No Yes

3. RACE:

- White
- Black or African-American
- Asian
- Native Hawaiian/Pacific Islander
- American Indian/Alaskan Native
- Race not known or other
- More than one race

4. GRADE:

5th 6th 7th 8th

5. AGE:

10 years old or younger 12 years old
 11 years old 13 years old or older

6. During any time in your life, has either of your parents or guardians been sent to Iraq, Afghanistan, or other combat zone because they are in the military? (Military includes Army, Navy, Marines, Air Force, National Guard, and Reserves.)

No
 Yes
 Not sure

7. During any time in your life, has either of your parents or guardians served time in jail or prison?

No
 Yes
 Not sure

The following questions ask about your **USE OF ALCOHOL AND OTHER DRUGS.**

8. How many times in the last month (30 days) have you used... ?

Never 1-5 times 6-19 times 20-39 times 40 times or more

	Never	1-5 times	6-19 times	20-39 times	40 times or more
Cigarettes	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Alcohol (beer, wine, liquor, wine coolers)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Marijuana (pot, hash, weed, kush, Mary Jane)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Inhalants (whip-its, huffing, aerosol spray can, etc.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Vivoxiline (Vivo)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Prescription drugs (like OxyContin, Xanax, Vicodin, Adderall, etc.) not prescribed to you	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Other illegal drugs	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

9. At what age did you first use...?

Never used 10 or younger 11 12 13 or older

	Never used	10 or younger	11	12	13 or older
Cigarettes	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Alcohol (beer, wine, liquor, wine coolers)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Marijuana (pot, hash, weed, kush, Mary Jane)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Inhalants (whip-its, huffing, aerosol spray can, etc.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Vivoxiline (Vivo)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Prescription drugs (like OxyContin, Xanax, Vicodin, Adderall, etc.) not prescribed to you	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Other illegal drugs	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

The following questions ask about what you **THINK OR FEEL.**

10. How much do you think people risk harming themselves (physically or in other ways) if they... ?

No risk Slight risk Moderate risk Great risk

	No risk	Slight risk	Moderate risk	Great risk
Smoke one or more packs of cigarettes per day	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Try marijuana once or twice	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoke marijuana once or twice per week	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Take one or two drinks of an alcoholic beverage (beer, wine, liquor) nearly every day	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Have five or more drinks of an alcoholic beverage once or twice a week	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use prescription drugs not prescribed to them	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

11. How wrong do your friends feel it would be for you to... ?

	Very wrong	Wrong	A little bit wrong	Not at all wrong
Smoke tobacco	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoke marijuana	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Have one or two drinks of an alcoholic beverage (beer, wine, liquor) nearly every day	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use prescription drugs not prescribed to you	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

12. How wrong do your parents feel it would be for you to... ?

	Very wrong	Wrong	A little bit wrong	Not at all wrong
Have one or two drinks of an alcoholic beverage nearly every day	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Drink beer, wine or hard liquor (for example vodka, whiskey, or gin) regularly (at least once or twice a month)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoke cigarettes	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoke marijuana	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use prescription drugs not prescribed to you	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Steal something worth more than \$5	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Draw graffiti, or write things or draw pictures on buildings or other property (without the owner's permission)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Pick a fight with someone	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

13. Please answer the following questions:

	No	Yes
During the past 12 months, did you ever feel so sad or hopeless almost every day for two weeks or more in a row that you stopped doing some usual activities?	<input type="radio"/>	<input type="radio"/>
During the past 12 months, did you ever seriously consider attempting suicide?	<input type="radio"/>	<input type="radio"/>
During the past 12 months, did you make a plan about how you would attempt suicide?	<input type="radio"/>	<input type="radio"/>

14. Mark the Big "YES!" if you think the statement is definitely true for you.
 Mark the little "yes" if you think the statement is mostly true for you.
 Mark the little "no" if you think the statement is mostly not true for you.
 Mark the Big "NO!" if you think the statement is definitely not true for you.

	YES!	yes	no	NO!
The rules in my family are clear.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My parents ask if I've gotten my homework done.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
When I am not at home, one of my parents knows where I am and who I am with.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My family has clear rules about alcohol and drug use.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
We argue about the same things in my family over and over.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
People in my family have serious arguments.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
People in my family often insult or yell at each other.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My parents ask me what I think before most family decisions affecting me are made.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
If I had a personal problem, I could ask my mom or dad for help.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My parents give me lots of chances to do fun things with them.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

15. Please answer the following questions:

	All the time	Often	Sometimes	Never or almost never
My parents notice when I am doing a good job and let me know about it.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
How often do your parents tell you they're proud of you for something you've done?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

14. Please answer the following questions:

	Never Used Alcohol or Drugs	No	Yes
Do you ever use alcohol or drugs to relax, feel better about yourself, or fit in?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Do you ever use alcohol or drugs while you are by yourself, or alone?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Do you ever forget things you did while using alcohol or drugs?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Do your family or friends ever tell you that you should cut down on your drinking or drug use?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Have you ever gotten into trouble while you were using alcohol or drugs?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

15. Have you ever ridden in a car driven by someone (including yourself) who was "high" or had been using alcohol or drugs?

No Yes

16. How many times have you experienced the following due to your drinking or drug use during the past year?

	Never	Once	Twice	3-5 times	6-10 times	11 times or more
Performed poorly on a test or project	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Missed class	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

The following questions ask about what you THINK OR FEEL.

17. How much do you think people risk harming themselves (physically or in other ways) if they... ?

	No risk	Slight risk	Moderate risk	Great risk
Smoke one or more packs of cigarettes per day	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Try marijuana once or twice	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoke marijuana once or twice per week	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Take one or two drinks of an alcoholic beverage (beer, wine, or liquor) nearly every day	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Have five or more drinks of an alcoholic beverage once or twice a week	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use prescription drugs not prescribed to them	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

18. How wrong do you think it is for SOMEONE YOUR AGE to... ?

	Very wrong	Wrong	A little bit wrong	Not at all wrong
Drink beer, wine or hard liquor (for example vodka, whiskey, or gin) regularly, that is, at least once or twice a month	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoke cigarettes	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoke marijuana	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use LSD, cocaine, amphetamines or another illegal drug	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

19. How wrong do your friends feel it would be for you to... ?

	Very wrong	Wrong	A little bit wrong	Not at all wrong
Smoke tobacco	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoke marijuana	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Have one or two drinks of an alcoholic beverage (beer, wine, liquor) nearly every day	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use prescription drugs not prescribed to you	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

20. What are the chances you would be seen as cool if you... ?

	Very good chance	Pretty good chance	Some chance	Little chance	No or very little chance
Smoked cigarettes	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Began drinking alcoholic beverages regularly, that is, at least once or twice a month	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoked marijuana	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Carried a handgun	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

21. How wrong do your parents feel it would be for you to... ?

	Very wrong	Wrong	A little bit wrong	Not at all wrong
Have one or two drinks of an alcoholic beverage nearly every day	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Drink beer, wine or hard liquor (for example vodka, whiskey, or gin) regularly (at least once or twice a month)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoke cigarettes	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Smoke marijuana	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Use prescription drugs not prescribed to you	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Steal something worth more than \$5	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Draw graffiti, or write things or draw pictures on buildings or other property (without the owner's permission)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Pick a fight with someone	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

22. Please answer the following questions:

	No	Yes
During the past 12 months, did you ever feel so sad or hopeless almost every day for two weeks or more in a row that you stopped doing some usual activities?	<input type="radio"/>	<input type="radio"/>
During the past 12 months, did you ever seriously consider attempting suicide?	<input type="radio"/>	<input type="radio"/>
During the past 12 months, did you make a plan about how you would attempt suicide?	<input type="radio"/>	<input type="radio"/>

The following questions ask about your GAMBLING. Gambling is playing a game in an attempt to win money (any amount) or something of value (like a video game, bike, iPod). You could gamble on a game or an event. Gambling means you don't know if you will win or lose.

23. During the past 12 months, how often have you bet/gambled for money or valuables in the following ways? Gambling can be done in a variety of settings, including with family and friends.

	Never	Less than once a month	1-3 times per month	Once a week or more
Card games (poker, blackjack, euchre, mystery)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Personal games of skill (pool, darts, video games)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Sports (fantasy leagues, March Madness)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Lottery	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Bingo	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Online (internet) gambling	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Personal challenges (like a dare)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Bet/gambled in other ways	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

24. How often have you experienced the following consequences due to your gambling?

	I do not gamble	Never	Occasionally	Frequently
Academic problems (lower grades, did poorly on an exam)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Issues with the legal system	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Lost possessions or money	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Felt bad about gambling	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Poor health (sleep issues, depression, poor hygiene)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Issues with friends and family (lied, argued)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

The following questions ask about your SCHOOL EXPERIENCES.

25. Mark the Big "YES!" if you think the statement is definitely true for you.
 Mark the little "yes" if you think the statement is mostly true for you.
 Mark the little "no" if you think the statement is mostly not true for you.
 Mark the Big "NO!" if you think the statement is definitely not true for you.

	YES!	yes	no	NO!
In my school, students have lots of chances to help decide things like class activities and rules.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Teachers ask me to work on special classroom projects.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My teacher(s) notices when I am doing a good job and lets me know about it.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
There are lots of chances for students in my school to get involved in sports, clubs, or other school activities outside of class.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
There are lots of chances for students in my school to talk with a teacher one-on-one.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
I feel safe at my school.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The school lets my parents know when I have done something well.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My teachers praise me when I work hard in school.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
There are lots of chances to be part of class discussions or activities.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Are your school grades better than the grades of most students in your class?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

26. Now thinking back over the past year in school, how often did you... ?

	Never	Seldom	Sometimes	Often	A lot
Enjoy being in school	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Hate being in school	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Try to do your best work in school	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

27. During the LAST FOUR WEEKS how many whole days of school have you missed because you skipped or "cut"?

- None 1 2 3
 4-5 6-10 11 or more

28. How interesting are most of your courses to you?

- Very interesting and stimulating
 Quite interesting
 Fairly interesting
 Slightly boring
 Very boring

29. Putting them all together, what were your grades like last year?

- Mostly A's Mostly D's
 Mostly B's Mostly F's
 Mostly C's

30. How often do you feel that the schoolwork you are assigned is meaningful and important?

- Almost always
 Often
 Sometimes
 Seldom
 Never

31. How important do you think the things you are learning in school are going to be for your later life?

- Very important
 Quite important
 Fairly important
 Slightly important
 Not at all important

PLEASE DO NOT WRITE IN THIS AREA

SERIAL

The following questions ask about your FAMILY AND FRIENDS.

7

32. Please answer the following questions:

	YES!	yes	no	NO!
The rules in my family are clear.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My parents ask if I've gotten my homework done.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
When I am not at home, one of my parents knows where I am and who I am with.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My family has clear rules about alcohol and drug use.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
We argue about the same things in my family over and over.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
People in my family have serious arguments.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
People in my family often insult or yell at each other.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My parents ask me what I think before most family decisions affecting me are made.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

33. Please answer the following questions:

	YES!	yes	no	NO!
If I had a personal problem, I could ask my mom or dad for help.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My parents give me lots of chances to do fun things with them.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Would your parents know if you did not come home on time?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
If you drank some beer or wine or hard liquor (for example, vodka, whiskey, or gin) without your parents' permission, would you be caught by your parents?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
If you carried a handgun without your parents' permission, would you be caught by your parents?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
If you skipped school, would you be caught by your parents?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Do you enjoy spending time with your mother?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Do you enjoy spending time with your father?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

34. Please answer the following questions:

	All the time	Often	Sometimes	Never or almost never
My parents notice when I am doing a good job and let me know about it.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
How often do your parents tell you they're proud of you for something you've done?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

35. Think of your four best friends (the friends you feel closest to). In the past year (12 months), how many of your best friends have...?

	None	1	2	3	4
Participated in clubs, organizations, or activities at school	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Made a commitment to stay drug-free	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Liked school	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Regularly attended religious services	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Tried to do well in school	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

36. How many times in the last month (30 days) do you think MOST STUDENTS IN YOUR SCHOOL used...

	Never	1-5 times	6-19 times	20-39 times	40 times or more
Alcohol (beer, wine, liquor, wine coolers)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Cigarettes	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Marijuana (pot, hash, weed, kush, Mary Jane)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Prescription painkillers (OxyCotin, Vicodin, Codeine, etc.) not prescribed to them	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Prescription stimulants (Adderall, Ritalin, etc.) not prescribed to them	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Prescription sedatives (Xanax, Valium, etc.) not prescribed to them	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
